Dear Sir / Madam

Re: RESOURCE CONSENT 2080121

Further to the above mentioned resource consent issued on the 17TH July 2008 for 5 residential apartments.

Conditions of your consent will be administered by Resource Consent Monitoring Officers at Councils Kaikohe Office.

Any documentation required to meet the conditions of your resource consent will need to be forwarded to the attention of Nicky Maihi.

The following conditions will require documentation

(6) Prior to commencing any physical site works a construction management plan shall be **submitted** to and approved by the Council. The plan shall contain information on, and site management procedures for, the following matters:

a. The timing of civil engineering, building construction and any demolition works, including hours of operation and key project and site management personnel and their contact details;

b. The transportation of demolition, construction and waste materials to and from the site, the loading and unloading of materials and the associated controls on vehicles through sign-posted site entrances and exits;

c. The excavation and filling works, including any retaining structures and any necessary de-watering requirements/methods, to be prepared by a Chartered Professional Engineer with suitable geotechnical qualifications and expertise;

d. Control of dust and on-site noise (including compliance with construction noise standards) and any appropriate avoidance or remedial measures;

e. Construction Traffic management on the Right of Way (Wallace Lane) to maintain single lane access for other access users and adjoining property owners.

f. Prevention of earth, mud, gravel or other material being deposited on adjoining roads by vehicles exiting the site, and proposing remedial measures should that occur;

g. Publicity measures, including signage, to inform adjacent landowners, occupiers, pedestrians and other users of School Road.

h. Safety fencing isolating the site from the Right of Way and pedestrian access to enable the safe passage of pedestrian traffic, including access to Lot 1 DP 140756

The Council may require all or parts of this report to be peer reviewed, with all costs associated with the review being met by the Consent Holder.

(8) That prior to the commencement of construction on site the consent holder shall **provide evidence** to confirm that Top Energy have removed the power poles along Wallace Lane and re-installed the power underground including connections to each of the existing properties serviced.

(10) That prior to the commencement of construction on site the consent holder shall upgrade the access along 'Wallace Lane' to provide a 5m minimum width concreted carriageway up to the southern boundary of Lot 3 DP 44530. The following requirements shall be met:

a. During construction these works will be supervised by the design engineer or a Certified Professional Engineer.

b. The construction shall be carried out in accordance with either option A or option B identified in the approved engineering plans prepared by PK Engineering referenced "Proposed Project Lot 3, 8 School Road, Paihia, dated April 08, Project 07 – 142, Sheet C3 (option A), Sheet C4 (option A), Sheet D8 (option A); Sheet C3 (option B), Sheet C4 (option B), Sheet D8 (option B), and attached to this consent with the Council's "Approved Plan" stamp affixed to it (dated 6 December 2006) and as required to be amended by the conditions of this consent.

[Note: The preferred upgrade option is option B, in principle and is subject to refinement and agreement to any easements necessary for the works being reached with the Body Corporate of Marsden Close, BC12274 Lot 1 DP 120926]

c. The shape and gradient of the existing driveway to Lot DP 44530 will be retained to ensure that the standard of access to numbers 10 and 12 School Road is not diminished.

d. The concrete surface of Wallace lane shall have a cross slope of 1:50 from the eastern side adjoining DP 120926 (Marsden Close) to the concreted dish drain on the western side.

e. A concrete kerb of a minimum height of 125 mm will be constructed along the eastern side of Wallace Lane adjoining DP 120926 (Marsden Close) to prevent surface water from overflowing onto DP 120926.

f. Services including power and phone lines and stormwater pipes shall be aligned and buried as close as practicable (taking into account any existing easements) to the middle of Wallace Lane. The power and phone lines shall be contained in separate ducting such that the materials for ducting and the size of ducts shall comply with the requirements of the network operators.

g. Prior to the completion of the concreting of the Wallace Lane carriageway the applicant shall **submit** for the consideration of Council the design and details of the stormwater pipe to be installed under the concreted carriageway. The design shall be completed by a C.P Engineer and shall include details of the overland flow path for the 1 in 100 year rainfall event.

h. Should the rock retaining wall on the boundary of Lot 2 DP 44530 be removed or damaged, the bank is to be suitably retained under the supervision of a Chartered Professional Geotechnical Engineer.

i. Should any damage occur to structural integrity of the carport on Lot 2 DP 44530, appropriate remedial action is to be undertaken immediately.

(12) That all earthworks and construction for the development (including the Wallace Lane improvement works) are to be supervised by a suitably qualified geotechnical engineer and appropriate measures are to be undertaken e.g. Sheet piling to stabilise the cut faces and prevent subsidence of adjacent properties. **This will require an engineer's producer statement upon completion of the works.**

(15) **At the time of submitting an application for building consent** a Registered Surveyor shall certify to Council in writing that the building will comply with the maximum height rules as specified in the District Plan, being a maximum height of 10 metres above average ground level. The surveyor is also to establish a datum on-site or adjacent to the site to provide a reference level against which the building height or ground settlement can be measured.

(16) Prior to the roof of the sixth level being installed on the building a **Registered Surveyor shall certify** to Council in writing that the building complies with the maximum height rules specified in the District plan being a maximum height of 10 metres above average ground level.

(17) That plans, including cross-sections, of the proposed vehicle entrance/exit shall be prepared by a Certified Professional Engineer and **submitted** to the council for approval prior to construction. The plans shall detail appropriate measures to provide maximum visibility for vehicle drivers and pedestrians using Wallace Lane.

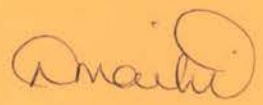
(21) That any stormwater discharged into the Council's stormwater system is to comply with the requirements and conditions of the Far North District Council's stormwater discharge consent. That a producer statement be **submitted** to the satisfaction of the Council's Resource Consents Manager specifying that the plans and specifications satisfy the building code requirement that surface water be disposed of in a way that avoids the likelihood of damage or nuisance to other property.

Please note that some conditions may require information to be provided at building consent stage, it is also important to provide a copy of the information to Nicky Maihi to ensure compliance of your consent condition.

Please note that a site visit will be then be conducted by a member of the Monitoring Team to check compliance of all other conditions. Once all conditions of your consent have been satisfied your consent can be filed as completed.

If you have any queries regarding conditions of your resource consent, please do not hesitate to contact me on 09 4015281.

Yours faithfully



Nicky Maihi

Dear Sir / Madam

Re – Resource Consent RC2080121

Further to the above mentioned consent issued on the 17th July 2008 to construct 5 apartments.

Please note that under Section 125 of the Resource management Act 1991 your consent lapsed on the 17th July 2013.

Please be aware that if this building is to be constructed in the future new resource consent may need to be obtained.

This resource consent has been placed on the property file as a lapsed consent.

If you require any further information please do not hesitate to contact me on 0800 920029.

Yours sincerely,

Nicky Maihi
Monitoring Officer – Field Services

Dear Sir / Madam

RE: RC-2080121-RMALUC – RESOURCE CONSENT APPLICATION - Paihia Limited, Land Use

Please find enclosed a copy of the planner's report and recommendation prepared for the above application for your information.

You are reminded that the hearing is set down for **31 March 2008** at the Council Chambers, MemoriaL Ave, Kaikohe at 10.00am, or as soon thereafter as circumstances permit.

If you have any further queries regarding this matter, please contact the undersigned.

Yours faithfully

Melissa McGrath

This issue has been assessed for the purposes of Section 79 of the Local Government Act 2002, and is considered to be of low significance.

REPORT

THE RESOURCE MANAGEMENT ACT 1991

AND THE FAR NORTH DISTRICT PARTLY OPERATIVE PLAN

Hearing:	**31st March 2008**
Report by:	**Melissa McGrath, Resource Planner**
Application Number:	**RC-2080121-RMALUC**
Applicant:	**Paihia Limited**
Proposal:	**Land Use**
Activity Classification: **RMA 1991**	**Restricted Discretionary**
Location:	**8 School Road, Paihia**
Legal Description:	**LOT 3 DP 44530**
Site Area:	**1189m^2**
Zoning:	**Commercial**
Submissions:	
Support	**4**
Objections	**15**
Attachments:	Executive Summary Planners Report Council engineers report Cadastral print out. Relevant district plan rules Application. Further information provided Submissions.

1.0 The Proposal

1.1 Paihia Limited has made resource consent application to construct and occupy a new residential apartment building, comprising of five residential units with on site car parking, at Wallace Lane, 8 School Road, Paihia.

1.2 The applicant proposes to construct a 10m high apartment building, comprised of car parking level at ground level, and six residential levels, containing five residential apartments.

1.3 Four of the five apartments proposed consist of a large master suite and two smaller guest suites (each with ensuite bathrooms), a large kitchen and living area separating the master suite form the guest suites and a study. One apartment is larger and split over levels five and six, containing three guest suites, one master bedroom, living space, games room and study.

1.4 Vehicle access to the building and ground level parking will be achieved from Wallace Lane.

2.0 The Site

2.1 The site is legally described as Lot 3 DP 44530, contained in certificate of title referenced NA1544/80. The site is 1189m2 area; access to the site is located off Wallace Lane, 8 School Road Paihia.

2.2 The site has a relatively steep contour with an easterly aspect. The site has been subject to slips in the past; the site is currently vacant, overgrown with grass and does not contain any native vegetation.

2.3 The site is located approximately 150m along Wallace Lane, from the intersection of School Road and State Highway 11 on the eastern side of Marsden Road/State Highway 11. The site is visible from the coast.

2.4 The nature and character of the surrounding properties is predominantly residential single unit development; however Marsden Close Apartments are located at 54 – 56 Marsden Road, adjacent to Wallace Lane. The site is in close proximity to amenities, with the entrance to the main public car park for Paihia being located some 50 metres along School Road.

2.5 Wallace Lane is a private way comprised of three consecutive access legs, with overlying reciprocal right of ways, the legal width of Wallace Lane is 6m. The following properties have right of way access over Wallace Lane:

Lot 3 DP 44530	Will contain the five residential units proposed.
Lot 1 DP 140756	Contain one residential unit with physical access from School Road
Lot 1 DP 73026	
Pt Lot 5 DP 44530	

Therefore three residential units currently utilise Wallace Lane for access, the proposal will result in a total of eight residential units gaining access over Wallace Lane.

2.6 Lots 1 and 2 DP 44530 (10 and 12 School Road) currently have physical access located on the School Road, road reserve. Both driveways link into the same vehicle crossing on School Road that serves Wallace Lane.

3.0 Activity Classification

3.1 Under the Partly Operative District Plan the site is zoned Commercial. The proposal complies with all the permitted activity bulk and location rules for the Commercial

zone apart from the parking and access provisions under rules 15.1.6.1.1 and 15.1.6.1.2. The following table sets out permitted activity rules that are not satisfied by the proposal:

Chapter 15 Transportation		
Rule Number & Name	**Standard**	**Comments**
Parking		
15.1.6.1.1 (b)	Where any activity established within the commercial zone, two loading spaces shall be required for a building with a gross floor area of between 500m2 and 5000m2.	The proposed building has a gross floor area of 790m2 and therefore two loading spaces are required under the District Plan. The proposal fails to provide these spaces.
Vehicle Access		
15.1.6.1.2 (b)	Any access carriageway from the road to any parking or loading space within the commercial zone, shall be 6m wide for a two-way operation.	The proposal fails to comply with this requirement because the proposed access, is located over Wallace Lane which is only 5m wide.
15.1.6.1.2(c)	The construction of private access, in addition to the specifies covered should be undertaken in accordance with Appendix 3B Part 3, and the grade shall be no steeper than 1 in 20 adjacent to the road boundary for a length of at least 6m in the commercial zone.	The applicant has provided an engineers report prepared by TPC engineering which confirms that the proposal will be unable to achieved the required grade according to the plan rules, but with suggested upgrading the entrance will be 1 in 4.4 to 1 in 7.2.
15.1.6.1.2(e)(ii)	Vvehicle access shall not be permitted onto a local road within 90m of its intersection with a arterial or collector road.	Existing Wallace Lane is located approximately 30m from the School Road and State Highway 11 intersection, increased traffic movement and formation may result in exacerbation of the current traffic safety.
15.1.6.1.2(h)	Private access off street in the urban zones shall be constructed in accordance with Council's Engineering Standards and Guidelines and when serving two or more properties shall be widened to provide a double width entrance.	The proposed access design fails to comply with Council's Engineering Standards and Guidelines.
15.1.6.1.2 (m)	All residential accesses serving four or more sites or potential sites shall provide passing bays and vehicle queuing spaces at the entrance to the legal road.	Due to the width of Wallace Lane the applicant is unable to provide queuing space.

3.2 The application therefore requires assessment as a restricted discretionary activity under the Partly Operative District Plan. According to rule 15.1.7 Council must restrict is discretion to the following matters:

15.1.7.1 PARKING

(a) Whether it is physically practicable to provide the required car parks on site.

(b) Whether there is an adequate alternative supply of parking in the vicinity, such as a public car park or angled road parking.

(c) Whether there is another site nearby where a legal agreement could be entered into with the owner of that site to allow it to be used for the parking required for the application.

(d) Whether it can be shown that the actual parking demand will not be as high as that indicated in ***Appendix 7C***.

(e) Adequacy of the layout and design of the car parking areas in terms of other recognised standards.

(f) Degree of user familiarity with the car park and length of stay of most vehicles.

(g) Total number of spaces in the car park.

(h) Clear space for car doors to be opened even if columns, walls and other obstructions intrude into a car parking space.

(i) For sites with a frontage with Kerikeri Road between its intersection with SH10 and Cannon Drive:

(i) the visual impact of hard surfaces and vehicles on the natural environment;

(ii) the effectiveness of any landscape plantings in screening hard surfaces and vehicles associated with parking areas.

15.1.7.2 VEHICLE ACCESS

(a) Adequacy of sight distances available at the access location.

(b) Any current traffic safety or congestion problems in the area.

(c) Any foreseeable future changes in traffic patterns in the area.

(d) Possible measures or restrictions on vehicle movements in and out of the access.

(e) The adequacy of the engineering standards proposed and the ease of access to and from, and within, the site.

(f) The provision of access for all persons and vehicles likely to need access to the site, including pedestrian, cycle, disabled, vehicular.

(g) The provision made to mitigate the effects of stormwater runoff, and any impact of roading and access on waterways, ecosystems, drainage patterns or the amenities of adjoining properties.

15.1.7.3 PROPERTY ACCESS GENERALLY

(a) The provisions of the roading hierarchy, and any development plans of the roading network.

(b) The need to provide alternative access for car parking and vehicle loading in business zones by way of vested service lanes at the rear of properties, having regard to alternative means of access and performance standards for activities within such zones.

(c) Any need to require provision to be made in a subdivision for the vesting of reserves for the purpose of facilitating connections to future roading extensions to serve surrounding land; future connection of pedestrian accessways from street to street; future provision of service lanes; or planned road links that may need to pass through the subdivision; and the practicality of creating such easements at the time of subdivision application in order to facilitate later development.

(d) Enter into agreements that will enable the Council to require the future owners to form and vest roads when other land becomes available (consent notices shall be registered on such Certificates of Title pursuant to ***Rule 13.6.7***).

(e) Any requirements of Transit New Zealand in respect of Limited Access roads and State Highways.

4.0 Sections 93 & 94, Resource Management Act 1991

A separate determination has been made relating to the processing of the proposal. A determination has been made that the application would require limited notification as the proposal complies with the bulk and location rules for the Commercial zone under the District Plan and the traffic report submitted with the application concludes that, due to the

width and gradient of the proposed access the proposed activity fails to meet the provision of the District Plan.

5.0 Summary of Submissions

5.1 The following is a summary of the submissions received:

Submittor	Support/Oppose	Comments	Speak
Transit New Zealand	Unopposed		No
Ronald William Simpson	Oppose	• Parking and Access • Stormwater • Ground Stability • Seeking assurances relating to the effects on surrounding properties specifically Marsden Close Apartments	Yes
Violet Johnson	Oppose	• Access and car parking • Significant increase in traffic flow along Wallance Lane and School Road • Number of construction vehicles accessing the site over 12 month construction period • Wallace Lane does not comply with the District Plan Rules for road width for two way access • Mitigation Measures proposed by the applicant are wholly inadequate to avoid, remedy or mitigate the effects of these works	Yes
Marsden Close Body Corporate	Oppose	That the widening and supposed/proposed strengthening of the driveway particular reference to the boundary of BC 122747 (Marsden Close) affecting two owners specifically units 1 and 2 and/or the common area of the body corporate.	Yes
James Ranken Hellaby Frederick John Rankken Hellaby Charlotte M Hellaby Tom Hellaby	Oppose	• Concern with residential lane servicing commercial sized development • Instability of lane with increased traffic flow with developers' trucks and vans, vibrations causing cracks to retaining wall and house • Risk of damage to retaining walls because land made unstable with trucks.	Yes
Marlyn 2000 Limited Trading As Ala-Moana Motel	Oppose	• The size of the development • The shadow on existing buildings from this building • The possible drainage to existing buildings from the proposed earthworks	Yes
Timothy John Orgias	Support (with conditions)	The applicant shall ensure that the access to 10 and 12 School Road from School Road is, at least, no steeper than it is currently to allow for a sate entrance and exist from those two properties. If this is achieved then the proposal is supported.	No
Ian Alan MacDonald	Oppose	• Traffic and parking control • Design aspects • Potential damage to Wallace Lane and block retaining wall	Yes

James Frederick Brock Leonie June Brock	Oppose	• Proposed access does not meeting an appropriate standard for the development, nor is adequate access able to be formed for this level of development intensity, given the available legal width of the easement and physical constraints • It will have more than minor effects on safety and efficiency of the roading network • It will have more than minor effects on the existing amenity of the area • It is contrary to the objectives and policies of the District Plan • The land is unstable and there is no certainty that a project of this scale can proceed without detriment to adjoining/adjacent property • Approving the application could also be seen to legitimise use of the site in terms of the permitted Commercial Zone Traffic Intensity of 200 daily movements and thereby further compromise amenity and safety.	Yes
Christine Maria Habicht Frank Erich Habicht	Oppose		
Hugh Vernon Wallace Pamela Joy Wallace	Oppose		
Mr Lloyd H Wallace	Support	The complete development at 8 School Road Paihia	No
Stanley William George Morley	Support (subject to conditions)	• The applicant shall retain the shape and gradient of the drive to give No.10 and No. 12 Wallace Lane residents access as good or better than existing • The applicant shall retain the bank should the rock wall be removed. • It would seem to be sensible to bury the power wires at the time of development.	Yes

5.2 The matters of concern raised can be generalised into categories, listed below in no particular order:

- Safety of proposed access, particularly gradient of Wallace Lane, Cumulative effects
- Site stability of Lot 3 DP 44530, adjoining properties and Wallace Lane
- Visual amenity and size of the proposed building
- Adverse effects from increased traffic use of Wallace Lane
- Parking availability and manoeuvring

6.0 Consideration of Application

6.1 Section 104(1) of the Resource Management Act, Consideration of Applications, sets out the matters that a consent authority must (subject to Part 2) have regard to when considering a resource consent application. These are:

(a) Any actual and potential effects of on the environment of allowing the activity; and

(b) Any relevant provisions of—

(i) A national policy statement:

(ii) A New Zealand coastal policy statement:

(ii) A regional policy statement or proposed regional policy statement:

(iii) A plan or proposed plan; and

(c) *Any other matter the consent authority considers relevant and reasonably necessary to determine the application.*

6.2 Section 104(2) provides for a consent authority to disregard an adverse effect on the environment if the plan permits an activity with that effect.

6.3 Section 104(5) provides for a consent authority to grant a resource consent on the basis that the activity is a controlled activity, a restricted discretionary activity, a discretionary activity, or a non-complying activity, regardless of what type of activity the application was expressed to be for.

7.0 Part 2 of the Act

7.1 Part 2 of the Resource Management Act sets out the purpose and principles of the Act, including matters of national importance. The purpose of the Act is to promote the sustainable management of natural and physical resources. In the Act, "sustainable management" means:

".... Managing the use, development, and protection of natural and physical resources in a way, or at a rate, which enables people and communities to provide for their social, economic, and cultural well being and for their health and safety while –

(i) Sustaining the potential of natural and physical resources (excluding minerals) to meet the reasonably foreseeable needs of future generations; and

(ii) Safeguarding the life-supporting capacity of air, water, soil, and ecosystems; and

(iii) Avoiding, remedying, or mitigating any adverse effects of activities on the environment.

7.2 Section 6 of the Act lists the following as matters of national importance:

(a) The preservation of the natural character of the coastal environment (including the coastal marine area), wetlands, and lakes and rivers and their margins, and the protection of them from inappropriate subdivision, use, and development:
(b) The protection of outstanding natural features and landscapes from inappropriate subdivision, use, and development:
(c) The protection of areas of significant indigenous vegetation and significant habitats of indigenous fauna:
(d) The maintenance and enhancement of public access to and along the coastal marine area, lakes, and rivers:
(e) The relationship of Maori and their culture and traditions with their ancestral lands, water, sites, waahi tapu, and other taonga.
(f) the protection of historic heritage from inappropriate subdivision, use, and development.
(g) the protection of recognised customary activities.

7.3 Section 7 of the Act states:

"In achieving the purpose of this act, all persons exercising functions and powers under it, in relation to managing the use, development and protection of natural and physical resources, shall have particular regard to:

(a) Kaitiakitanga:
(aa) The ethic of stewardship:
(b) The efficient use and development of natural and physical resources:
(ba) the efficiency of the end use of energy:
(c) The maintenance and enhancement of amenity values:
(d) Intrinsic values of ecosystems:
(e) [Repealed]

(f) Maintenance and enhancement of the quality of the environment:
(g) Any finite characteristics of natural and physical resources:
(h) The protection of the habitat of trout and salmon:
(i) the effects of climate change:
(j) the benefits to be derived from the use and development of renewable energy.

7.4 Section 8 of the Act requires all persons exercising functions and powers under it, in relation to managing the use, development and protection of natural and physical resources, shall take into account the principles of the Treaty of Waitangi.

7.5 Of these matters within Part 2 of the Act the most relevant to the proposal are Sections 7 (a) and (b), with the requirement achieve sustainable development, by "avoiding, remedying, or mitigating any adverse effects of activities on the environment".

8.0 Environmental effects are assessed as follows:

8.1 Vehicle Access:

Vehicle access to the site is via right of way, on Wallace Lane, 8 School Road, Paihia. According to Appendix 3B (Standards for Private Access) of the District Plan, access standards in the Commercial zone for more than 5 dwelling units require that a access must have a legal width of 8m and a formed carriageway width of 6m; Wallace Lane is only 6m wide legally and is unable to be formed to comply with the standards under the Commercial zone rules of the District Plan and Engineering Guidelines.

The proposal will result in an increase of five residential units utilising Wallace Lane for access, as the proposed activity consists of residential development and the surrounding properties contain residential development it is consider reasonable to expect the access to meet the residential zone standards. According to Appendix 3B (Standards for Private Access) of the District Plan access standards in the Residential zone for 5 - 8 dwelling units, must have a legal width of 7.5m, and a carriageway width of 5m. Therefore the proposed width of Wallace Lane meets the carriageway width requirements for the Residential zone.

Due to the physical constraints of the access and location the applicant has opted to upgrade Wallace Lane to provide a 5m wide formed carriageway. During the construction period, increased traffic will affect the use of Wallace Lane, and upgrading with relevant construction management plans will help with mitigation of the activity. The applicant has provided a traffic report prepared by Traffic Planning Consultants, David Phillip, dated August 2007 and subsequent additional information in letters dated 30 October 2007, and 17 December 2007. This report concludes that with upgrading of the existing vehicle access the safety and operation of the access would be acceptable.

Wallace Lane is currently located within 30m of the School Road intersection School Road intersection with State Highway 11. This intersection has recently been upgraded and widened to improve, sight distances and road safety. The traffic report submitted within the application states that School Road and the intersection of School Road with State Highway 11 will not result in adverse effects to traffic safety. Council's Development Engineer Marius Gabriels, has completed a site inspection and assessment of the application. He has confirmed that the sight distances from the entrance to School Road and the intersection with State Highway 11 are safe according to the Austroads recommended standards. Transit New Zealand has also confirmed that they consider the proposal will not result in adverse effects to the intersection and remain un-opposed to the application.

Included within the recommendations of the traffic report, is one that the applicant undertake works to improve access to Wallace Lane from School Road. The report states that a fairly flat platform can be constructed within the School Road, road reserve at the entrance of Wallace Lane to enable traffic to move safely onto School Road and access to 10 and 12 School Road will be re-aligned. Overall it is considered that the traffic accessing the site will not result in effects any more than minor to the roading network and the functioning of the intersection.

8.2 Traffic Movements:

The proposal will result in increased traffic generation from the existing site, utilising Wallace Lane for access. According to permitted activity rule 7.7.5.1.6 Traffic Intensity in the Commercial zone, the traffic intensity factor for a site in this zone is 200 daily one way movements (DOWM). Appendix 3A (Traffic Intensity Factors) of the District Plan, a residential unit has a traffic intensity factor of 10 DOWM. The proposal will result in 50 DOWM and therefore the proposal is well within the limits within the Commercial zone. If added to the additional traffic intensity factors for the existing users of Wallace Lane (this being three residential units, 30 DOWM) the total DOWM over Wallace Lane will be 80. During construction phase traffic effects to Wallace Lane will be adverse, however once construction is complete traffic associated with the residential development will be no more than minor.

The traffic report provided within the application concludes that with upgrading of the existing vehicle access the safety and operation of the access would be acceptable, and that the increased traffic intensity will not result in adverse effects to traffic safety on Wallace Lane and School Road. Council's Resource Consent Engineer concurs with this report subject to compliance with recommended conditions of consent. Overall it is considered that the traffic generation associated with the site will not result in effects any more than minor to the roading network.

8.3 Noise:

The proposed activity will result in the generation of increased noise during construction periods. However this noise will have to comply with the construction noise requirements under the District Plan. As such it is considered that the noise to be generated is at an acceptable level for the environment and effects should be assessed as minor.

8.4 Cultural Effects:

The site is not identified within the District Plan as being of significance to Maori, or containing registered archaeological sites. Taking these matters into account it is not considered that there are any adverse cultural effects associated with the proposal. No concerns have been raised from local iwi.

8.5 Visual and Amenity Effects:

The property is located in the Commercial zone and complies with all relevant bulk and location permitted activity rules e.g. 100% impermeable surface site coverage, no landscaping required, 10m building height etc in the District Plan. As the application is considered to be a restricted discretionary activity, matters relating to visual and amenity impacts can not be considered. Concerns have been raised by submitters focused on the size and location of the proposed building rather than the impact of the proposal on the access way, Wallace Lane. As the building complies with the Commercial zone rules under the District Plan it is considered that those concerns raised are beyond the matters to which Council must restrict its discretion.

8.6 Stability:

The applicant has provided a Site Suitability Report prepared by PK Engineering dated June 2007; this report concludes that the site shows evidence of being prone to slips in the past and that the proposed development is suitable provided that the specified

conditions are met. This report does not provide specific mentioned of the stability of Wallace Lane, as questioned by several submitters. The District Plan has no earthworks controls for the Commercial zone; Council's Resource Consent Engineer considers that provided the recommendations within the engineering report submitted are met the proposed building development will not result in adverse stability effects.

8.7 Parking:

According rule 15.1.6.1.1 (a) (i) of the District Plan the minimum number of public off-street car parking spaces to be provided for users of the activity, shall be determined by reference to Appendix 3C. Accord Appendix 3C, each residential unit shall have 2 car parking spaces for its exclusive use. The applicant has provided a parking plan to confirm that 11 car parks are available in the ground floor of the proposed building.

According to rule 15.1.6.1.1 (b) of the plan, where any activity established within the commercial zone, two loading spaces shall be required for a building with a gross floor area of between 500m2 and 5000m2. The proposed building has a gross floor area of 790m2 and therefore two loading spaces are required under the District Plan. The proposal fails to provide these spaces, however the proposed activity is for residential purposes only; residential development of this size will not require regular deliveries as a commercial activity would. Therefore it is considered that the proposal will not result in adverse effects as a result of lack of loading spaces.

During the construction period, the proposed activity will result in additional construction traffic, it is considered that subject to compliance with conditions of consent the proposal will not result in adverse effects as a result of parking.

8.8 The environmental effects associated with the proposal have been assessed above. These effects are either provided for as permitted activities, or the applicant has provided details of mitigation measures, any adverse effects are considered to be no more than minor provided that conditions of consent are complied with.

9.0 Relevant Objectives and Policies of the Partly Operative District Plan

9.1 Of the statutory documents listed in section 104(1) of the Act, Partly Operative District Plan is considered to have relevance to the proposal.

Urban Environment :

7.3 OBJECTIVES

7.3.1 To ensure that urban activities do not cause adverse environmental effects on the natural and physical resources of the District.

7.3.2 To enable the continuing use of buildings and infrastructure in urban areas, particularly where these are under-utilised.

7.3.3 To avoid, remedy or mitigate the adverse effects of activities on the amenity values of existing urban environments.

7.3.4 To enable urban activities to establish in areas where their potential effects will not adversely affect the character and amenity of those areas.

7.3.5 To achieve the development of community services as an integral and complementary component of urban development.

7.3.6 To ensure that sufficient water storage is available to meet the needs of the community all year round.

7.4 POLICIES

7.4.1 That amenity values of existing and newly developed areas be maintained or enhanced.

7.4.2 That the permissible level of effects created or received in residential areas reflects those appropriate for residential activities.

7.4.3 That adverse effects on publicly-provided facilities and services be avoided or remedied by new development, through the provision of additional services.

7.4.4 That stormwater systems for urban development be designed to minimise adverse effects on the environment.

7.4.5 That new urban development avoid:

(a) adversely affecting the natural character of the coastal environment, lakes, rivers, wetlands or their margins;

(b) adversely affecting areas of significant indigenous vegetation or significant habitats of indigenous fauna;

(c) adversely affecting outstanding natural features, landscapes and heritage resources;

(d) adversely affecting the relationship of Maori and their culture and traditions with their ancestral lands, water, sites, waahi tapu, and other taonga;

(e) areas where natural hazards could adversely affect the physical resources of urban development or pose risk to people's health and safety;

(f) areas containing finite resources which can reasonably be expected to be valuable for future generations, where urban development would adversely affect their availability;

(g) adversely affecting the safety and efficiency of the roading network;

(h) the loss or permanent removal of highly productive and versatile soils from primary production due to subdivision and development for urban purposes.

7.4.6 That the natural and historic heritage of urban settlements in the District be protected (refer to ***Chapter 12***).

7.4.7 That urban areas with distinctive characteristics be managed to maintain and enhance the level of amenity derived from those characteristics.

7.4.8 That infrastructure for urban areas be designed and operated in a way which:

(a) avoids remedies or mitigates adverse effects on the environment;

(b) provides adequately for the reasonably foreseeable needs of future generations; and

(c) safeguards the life-supporting capacity of air, water, soil and ecosystems.

7.4.9 That the need for community services in urban areas is recognised and provided for.

Commercial Zone:

7.7.3 OBJECTIVES

These objectives supplement those set out in ***Section 7.3***.

7.7.3.1 To achieve the development of commercial areas in the District accommodating a wide range of activities that avoid, remedy or mitigate the adverse effects of activities on other activities within the Commercial Zone and on the natural and physical resources of the District.

7.7.4 POLICIES

These policies supplement those set out in ***Section 7.4***.

7.7.4.1 That the Commercial Zone be applied to areas which are traditional commercial centres, and also to areas where the provision of commercial activity would not have adverse environmental effects, and would contribute to the needs and well being of the community.

7.7.4.2 That the range of activities provided for in the Commercial Zone be limited only by the needs for the effects generated by the particular activity to be consistent with other activities in the zone.

7.7.4.3 That standards be applied that protect visual and environmental amenity within the Commercial Zone, and the amenity of adjacent zones.

7.7.4.4 That stormwater disposal systems do not result in suspended solids, industrial by-products, oil, or other contaminated substance or waste entering the stormwater collection system in concentrations that are likely to pose an immediate or long term hazard to human health or the environment.

COMMENT: The subject site is located in the commercial zone; however the proposal to construct five residential apartments is not creating a public commercial facility for the Paihia Township. The activity is consistent with the bulk and location provisions for the commercial zone.

10.0 Conclusion

10.1 The proposed residential activity will be consistent with the zoning. It is my opinion that subject to compliance with conditions of consent the environmental effects associated with the proposal are minor in nature and in most instances satisfy the permitted activity status of the Partly Operative District Plan.

10.2 The proposal is considered to be generally consistent with the objectives and policies of the Partly Operative District Plan and with the provisions of the Regional Policy Statement. In relation to Part 2 of the Act the activity is considered to result in sustainable management of natural and physical resources.

11.0 Recommendation

11.1 It is recommended that the application Limited to construct and occupy a new residential apartment building, comprising of five residential units with on site car parking, at Wallace Lane, 8 School Road, Paihia, being more particularly described as Lot 3 DP 44530 be granted consent, subject to conditions of consent.

RECOMMENDATION:

That pursuant to Sections 104 and 104C of the Resource Management Act 1991, the Council grants its consent to Paihia Limited to construct and occupy a new residential apartment building, comprising of five residential units with on site car parking, at Wallace Lane, 8 School Road, Paihia, being more particularly described as Lot 3 DP 44530 contained in NA1544/80 (North Auckland Registry) subject to the following conditions:

(1) The development shall be carried out in accordance with the approved architectural plans prepared by Ormiston Project Management Limited, referenced "Paihia Projects Ltd, Wallace Lane, Paihia, Proposed Development" dated 26 March 2007, and access detail plan prepared by TPC, referenced "Lot 3, 8 School Rd, Paihia, Existing Access Details & Proposed Widening (5.0m), and attached to this consent with the Council's "Approved Plan" stamp affixed to it (dated 6 December 2006) and as required to be amended by the conditions of this consent.

(2) The proposed building and associated plant shall be constructed and operated in accordance with the recommendations and comments set out in the report prepared by Golder Associates and dated 29th June 2007.

(3) The proposed activity is to comply with the permitted noise levels as set out in the Partly Operative District Plan. Any issue of non-compliance with the prescribed levels will necessitate monitoring by Council, the costs of which may be required to be recovered from the applicant.

(4) Construction noise shall meet the limits recommended in, and shall be measured and assessed in accordance with, NZS 6803P:1984 'The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work'.

(5) If the windows must remain closed to achieve the above internal sound levels in the bedrooms then mechanical ventilation shall be provided to meet the requirements of the Building Code (clause G4).

(6) Earthworks requiring heavy machinery and mechanical digging equipment, and the use of any power tools on site, shall be restricted to the hours of between 8.00 am to 6.00 pm Monday to Friday and 8.30 am to 1.00 pm Saturday. There shall be no movement of heavy vehicles to and from the site outside of these hours.

All other works shall be restricted to the hours of between 7.30 am to 6.00 pm Monday to Friday and 8.00 am to 1.00 pm Saturday.

No work shall be undertaken on Sundays and public holidays.

(7) Prior to commencing any physical site works a construction management plan shall be submitted to and approved by the Council. The plan shall contain information on, and site management procedures for, the following matters:

a. The timing of civil engineering, building construction and any demolition works, including hours of operation and key project and site management personnel and their contact details;

b. The transportation of demolition, construction and waste materials to and from the site, the loading and unloading of materials and the associated controls on vehicles through sign-posted site entrances and exits;

c. The excavation and filling works, including any retaining structures and any necessary de-watering requirements/methods, to be prepared by a Chartered Professional Engineer with suitable geotechnical qualifications and expertise;

d. Control of dust and on-site noise (including compliance with construction noise standards) and any appropriate avoidance or remedial measures;

e. Construction Traffic management on the Right of Way (Wallace Lane) to maintain single lane access for other access users and adjoining property owners.

f. Prevention of earth, mud, gravel or other material being deposited on adjoining roads by vehicles exiting the site, and proposing remedial measures should that occur;

g. Publicity measures, including signage, to inform adjacent landowners, occupiers, pedestrians and other users of School Road.

h. Safety fencing isolating the site from the Right of Way and pedestrian access to enable the safe passage of pedestrian traffic, including access to Lot 1 DP 140756

The Council may require all or parts of this report to be peer reviewed, with all costs associated with the review being met by the Consent Holder.

(8) All construction works on the site are to be undertaken in accordance with the approved Construction Management Plan.

(9) That prior to the commencement of construction on site the consent holder shall provide evidence to confirm that Top Energy have removed the power poles along Wallace Lane and re-installed the power underground including connections to each of the existing properties serviced.

(10) That prior to the commencement of construction on site the consent holder shall upgrade the existing entrance off School Road to provide a double width commercial entrance complying with the Council's Engineering Standard FNDC/S/2. The upgraded entrance is to accommodate the continuing use by all of the adjacent lots which currently share the common entry point.

(11) That prior to the commencement of construction on site the consent holder shall upgrade the access along 'Wallace Lane' to provide a 5m minimum width concreted carriageway up to the southern boundary of Lot 3 DP 44530.

(12) That prior to any excavation commencing, the consent holder is to provide evidence that all consents (earthworks permits and/or resource consent) for the disposal of fill have been obtained for the receiving site.

(13) That during the construction phase all trade vehicles are to be located on the application site or existing roadside parking or the public car park.

(14) That all earthworks and construction for the development are to be completed in accordance with the Site Stability and Suitability Report prepared by PK Engineering, Job No. 07-56 and dated June 2007.

(15) That all earthworks and construction for the development are to be supervised by a suitably qualified geotechnical engineer and appropriate measures are to be undertaken e.g. Sheet piling to stabilise the cut faces and prevent subsidence of adjacent properties. This will require an engineer's producer statement upon completion of the works.

(16) Any fill required to be utilised for the proposed earthworks shall comply with Rule 12.3.6.1.4 of the Partly Operative District Plan.

(17) That the consent holder shall locate all underground services prior to excavation and undertake measures to relocate and/or protect existing services. No work is to be undertaken on council provided services or in the vicinity of these services without the prior approval of the Council's Utilities Manager.

(18) At the time of submitting an application for building consent a Registered Surveyor shall certify to Council in writing that the building will with the maximum height rules specific in the District Plan being a maximum height of 10 metres above average ground level. The surveyor is also to establish a datum on-site or adjacent to the site to provide a reference level against which the building height or ground settlement can be measured.

(19) Prior to the roof of the sixth level being installed on the building a Registered Surveyor shall certify to Council in writing that the building complies with the maximum height rules specified in the District plan being a maximum height of 10 metres above average ground level.

(20) That plans, including cross-sections, of the proposed vehicle entrance/exit shall be prepared by a Certified Professional Engineer and submitted to the council for approval prior to construction. The plans shall detail appropriate measures to provide maximum visibility for vehicle drivers and pedestrians using Wallace Lane.

(21) That a maximum height bar be installed at the entrance of the property to prevent over height vehicles (e.g. Boats on trailers and trucks) from entering the carpark.

(22) That 11 carparks be provided on site in accordance with the Ground Level Basement Plans prepared by, Ormiston Project Management Limited, referenced "Paihia Projects Ltd, Wallace Lane, Paihia, Proposed Development" dated 26 March 2007 and attached to this consent. Each apartment is to have two parking spaces identified and allocated for their specific use.

(23) That all carparks are to be marked in accordance with the requirements of the District Plan. The markings shall be completed prior to the apartments being occupied.

(24) That any stormwater discharged into the Council's stormwater system is to comply with the requirements and conditions of the Far North District Council's stormwater discharge consent. That a producer statement be submitted to the satisfaction of the Council's Resource Consents Manager specifying that the plans and specifications satisfy the building code requirement that surface water be disposed of in a way that avoids the likelihood of damage or nuisance to other property.

(25) That all security lighting required for the apartments is to be directed away from the adjoining sites. The locations and height of lighting is to be subject to the approval of the Council.

(26) That temporary advertising signage shall be limited to a maximum area of 12.0 m^2 and subject to council approval prior to installation.

(27) That no building, or part thereof, excavation or other work shall be left unfinished, or shall be allowed to fall into such a condition; and no land shall be allowed to deteriorate or to remain in such a condition that it would, in the opinion of the Council, visually detract from the amenities of the property, or adjoining properties, or the neighbourhood.

(28) Provide evidence to the Council that each unit has a separate metered water connection complying with Council requirements to the satisfaction of the Council's Utilities Manager.

(29) Pay, as may be required, the Council's actual and reasonable monitoring and administration fees for assessing compliance with these conditions, and for any additional site visits that may be necessary.

In consideration of the application under Section 104 of the Act, the following reasons are given for this decision in accordance with the requirements of Section 113 of the Act:

1. The environmental effects associated with the proposal are considered either to be minor and/or in accordance with the permitted activity standards of the partly operative district plan. In particular the proposed activity meets all bulk and location requirements for permitted activities in the Commercial zone. Infringements of permitted activity standards relate to parking and access in the Commercial zone only. Effects associated with these matters are considered to be minor.
2. The imposed conditions will ensure that the effect of the consent will be in compliance with the relevant provisions of the applicable district plan; and that such conditions will adequately avoid, or mitigate to a minor impact level, the expected adverse effects on the environment.
3. The proposal is considered to be consistent with the assessment criteria as outlined in the Partly Operative District Plan.
4. In making this decision the statutory provisions of Section 104 & 104C of the Act were considered. Also considered, chapters 7 (Urban environment), 11 (natural and physical resources), 14 (transportation), and the associated appendices of the Partly Operative District Plan. The proposal was also assessed against the relevant district wide provisions outlined part III of the plan.
5. The principle issues of the proposal were considered to be adequacy of access, site stability, stormwater runoff, traffic movements, and safety to the roading network. It was found that subject to compliance with conditions of consent, the proposal will not result in adverse effects.

ADVICE NOTES:

1. If any subsurface archaeological sites or remains are uncovered during the development of the site, all earthworks in the vicinity shall cease and local iwi and the New Zealand Historic Places Trust shall be contacted immediately so that appropriate action can be taken.
2. Please note a single connection to Council's reticulated Sanitary Sewer or Water may compromise the ability to subdivide by way of unit title in the future.

STATUTORY INFORMATION

(1) Pursuant to section 102 of the Local Government Act 2002, the Far North District Council has prepared and adopted a development contributions policy. Under this policy, the activity to which this consent relates may be subject to development contributions.

You will be advised of the assessment of the development contributions payable under separate cover in the near future.

It is important to note that the development contributions must be paid prior to commencement of the work or activity to which this consent relates.

Further information regarding Council's development contributions policy may be obtained from the long term council community plan (LTCCP) or Councils web page at www.fndc.govt.nz

(2) The registered proprietor of the land is advised that any earthworks (excavation or filling) which alters existing land contours and is undertaken within 20 metres of any road or other property boundary requires permission for the control of earthworks, pursuant to Chapter 22 of the Far North District Council General Bylaws, March 2008.

(3) Prior to undertaking any significant earthworks or clearance of vegetation on the land, the owner should assess the need for a land use consent from the Northland Regional Council and/or an earthworks permit under the *FNDC General Bylaws.*

(4) Prior to constructing a new or an additional vehicle access point to any site, the owner is to obtain a permit from the Council as to the siting (from a traffic safety point-of-view), earthworks, formation and drainage of such access in terms of the Council's Control of Vehicle Crossings Bylaw 2004.

(5) All building work must be carried out in accordance with the Building Act 2004.

(6) It is the responsibility of the consent holder to ensure all necessary building consents have been obtained and any geotechnical issues have been addressed to the Council's satisfaction prior to the commencement of earthworks. This planning consent is not an authority to commence work. To proceed further the consent holder will be required to lodge a further building consent application which can only be granted providing that the engineering, building and bylaw requirements are met.

(7) If any activity associated with this proposal, such as earthworks, fencing or landscaping, may modify, damage or destroy any archaeological site(s), an authority for the New Zealand Historic Places Trust must be obtained for the work to proceed lawfully. An Authority is required whether or not the land on which an archaeological site may be present is designated, resource consent or building consent has been granted, or the activity is permitted under the District or Regional Plan.

(8) If the Northland Regional Council's volume thresholds for earthworks are breached consent will be required from the Regional Council.

REPORT PREPARED BY MELISSA MCGRATH, RESOURCE PLANNER

REPORT REVIEWED AND APPROVED FOR SUBMISSION TO COMMISSIONER BY:

P.J. Killalea

RESOURCE CONSENT MANAGER, PAT KILLALEA

DATE: 19 March 2008

FAR NORTH DISTRICT COUNCIL

REPORT

TO:	**HEARING COMMISSIONERS**
FROM:	**RESOURCE CONSENTS ENGINEER**
DATE:	**14 MARCH 2008**
SUBJECT:	**PAIHIA LTD - LANDUSE CONSENT APPLICATION TO SONSTRUCT FIVE APARTMENTS ON LOT 3 DP 44530**
REF:	**RC-2080121-RMALUC**

The application is located within the commercially zoned area in Paihia close to the intersection of Marsden Road and School Road. The area is serviced by Councils reticulated sanitary server and water supply and there is no impediment to the property connecting to these services.

From an Engineering perspective there are two principle limitations to the development of the site.

1. ACCESS

Access to the site is via Wallace Lane, a narrow right of way with a single lane carriageway. The access does not comply with Councils permitted activity standard on several counts.

1.1 Rule 15.1.6.1.2 (e)

The entrance does not and cannot comply with the 90m set back distance from the Marsden Road / School road intersection.

Historically, Wallace Lane existed before Marsden Road and School Road were designated respectively as strategic and collector road.

Given the proximity and geometry of the intersection the actual traffic speed is 30-40 km/hr within the zoned 50 kmph speed restriction.

The 27m offset between Marsden Road and Wallace Lane is considered adequate given the relatively low numbers of turning traffic movement.

1.2 Rule 15.1.6.1.2. (c)

The gradient of the Wallace Lane access carriageway does not and cannot comply with the permitted activity standard. As the entrance off School Road is shared by No 10 (Lot 2 DP 44530) it is not possible to lower the carriageway to achieve the permitted activity standard without adversely electing access to No 10. By contrast the access to No 12 School Road can accommodate the upgrading of the entrance by filling and regrading the first 10m or so of the No 12 driveway.

1.3 Rule 15.1.6.1.2 (b)

The commercial zone permitted activity standard requires a 6m wide sealed carriageway for two way operation; given the constraints of legal width and topography this cannot be achieved. However the application describes this essentially as a residential activity and in this case the residential carriageway standard of 5m can be achieved. The applicant would be required to remove the power poles and provide underground power, as well as construct retaining walls to support the carriageway.

2. SITE STABILITY

The site consists of steep slopes on weathered greywacke. There is evidence of recent slippage and associated slip debris at the toe of the slope.
The site suitability report prepared by PK Engineering identifies intact rock at 2.5m which will provide suitable foundation conditions. Excavations to remove weathered overburden will also improve the factor of safety against slope failure.

The Applicants Engineer has included a list of recommendation pertaining to the development of the site and it is accepted that providing the recommendations are adopted and work is supervised by a competent Chartered Professional Engineer with appropriate Geotechnical expertise then the site can be safely developed.

Recommended conditions of consent have been included in the planners report.

Rex Shand
RESOURCE CONSENTS ENGINEER

The information supplied with this application is true and complete to the best of my knowledge. I understand that Council is relying on this information in making its decision on this resource consent.

Signature of ~~Applicant~~/Agent : .....
(Strike out that which does not apply)

Dated : 08.08.07

Please Note : Council is unable to accept your application until *all* details are completed, *all* relevant information provided, the application signed and the Standard fees paid. (See notes below and check list back page). Application must be signed by agent if receiving invoices as in question 2 opposite.

NOTES

1. Full name and address of applicant must be given, however if applicant is not the owner of the property, name and postal address of owner must be supplied.

2. Additional fees and charges associated with the processing of the consent can be invoiced directly to the applicant or alternatively, to the agent who is acting on his/her behalf.

3. Additional consents - Specify the following : Land use consent, subdivision consent, coastal permit, water permit, discharge permit or other consents as relevant, as well as any consent required under other legislation or other authority (ie Northland Regional Council) that may be important in regard to the proposal. Indicate if this application is in relation to a Building Consent, if so, give BC number.

4. Briefly describe the activity, i.e. Subdivide into three Lots; Build new cattery; New building too close to boundary etc.,

5. Legal Description. Describe the location in a manner which will allow it to be readily identified, eg. The street address, legal description, the name of any relevant stream, river or other body to which the application may relate, proximity to any well known landmark, etc.

6.& 7 Address for Service/Correspondence - If you are making your application through a consultant or other agent, then those details must also be provided. The agent is authorised to sign on behalf of the person making an application, and **must** sign the application if '**Box B**' is ticked in question 2.

SUBDIVISION APPLICATIONS - You are advised to employ a registered land surveyor or other professional to submit your application. He or she can advise you about the most appropriate type of subdivision for your land and estimate the total cost.

RESOURCE CONSENT INFORMATION PACK

PLEASE COMPLETE THIS FORM TO THE BEST OF YOUR ABILITY AND INCLUDE WITH YOUR RESOURCE CONSENT APPLICATION FORM

WHAT ARE YOU PROPOSING TO DO?

TO CONSTRUCT A MULTI-LEVEL, RESIDENTIAL APARTMENT BUILDING, WITH ACCESS ISSUES THAT FAIL TO COMPLY

WILL YOUR PROPOSAL REQUIRE ANY OF THE FOLLOWING

- The Construction / Extension / Demolition of Buildings — Yes / (No)
  If yes, please provide plans / diagrams drawn to scale showing the location, design and finished exteriors of the building(s)
- Earthworks — (Yes) / No

  If yes - What volume

  - Maximum height / depth

  (Please note that Council requires an engineers report for any earthworks over 50 cubic metres in volume and / or creates a cut face over 1.5 metres in height)
- Vegetation Clearance — Yes / (No)

  If yes - What type

  - How much
- Formation of an Accessway and / or Parking area — (Yes) / No
  If yes, the parking and associated manoeuvring areas will need to be shown on a site plan drawn to scale
- Effluent and Stormwater Disposal Systems — (Yes) / No

  If yes - How will effluent be disposed of (on-site or to a reticulated system) — RETICULATION

  - How will Stormwater be disposed of (on-site or to a reticulated system) — RETICULATION

  - How an engineer designed the system(s) — (Yes) / No
- Any Buildings Within 40 Metres of a Water Body (i.e. stream, river, the sea, lake, etc.) — Yes / (No)

  If yes - How far

WHERE POSSIBLE PLEASE USE DIAGRAMS AND PLANS DRAWN TO A RECOGNISED SCALE TO DETAIL THE PROPOSAL

Far North District Council

DESCRIPTION OF THE SITE AND SURROUNDING AREA

- What is the Area of the Site 1052 m^2
- What is the Topography of the Site (Flat / Rolling / Sandy / Wetland, etc.)

STEEP, GRASSED SITE.

- What Vegetation is Contained on the Site

GRASS

- Are There any Existing Buildings on the Site Yes / (No)
  If yes, please describe and provide a site plan showing their location and any access to the buildings

- Are there any Special Features on or near the Site Yes / (No)
  (e.g. archaeological sites, notable trees, historic buildings)
  If yes, please describe

If you are unsure regarding the possibility of historic sites, such as pa sites and buildings, you are advised to contact the New Zealand Historic Places Trust, who will be able to tell you more regarding possible sites.

- What is the Current Use of the Site and Surrounding Areas

THE SITE IS NOT BEING USED FOR ANY PURPOSE

Far North District Council

ASSESSMENT OF ENVIRONMENTAL EFFECTS

An Assessment of Environmental Effects is required with all resource consent applications. You will need to consider actual and potential effects, and whether they will be minor or significant.

The detail of the assessment should reflect the magnitude of your proposal, i.e. if you are constructing a garage, your Assessment of Environmental Effects will be simple, as opposed to an Assessment for a motel complex. If any effects are unknown, it is recommended that you obtain professional advice to determine what the effects will be.

WHAT ASPECT(S) OF YOUR PROPOSAL WILL AFFECT?

- Others on Your Property and / or Your Neighbours?
  (e.g. shading of their property, sotrmwater flows, increased noise)

SEE AEE

Will these Effects be Significant or Minor, and How can they be Reduced?

AS ABOVE

- What Effects will the Proposal have on the wider community?

AS ABOVE

Will these Effects be Significant or Minor, and How can they be Reduced?

AS ABOVE

- Maori Culture? (e.g. destroy or occupy site of significance to Maori)

AS ABOVE

- Any Ecosystems? (e.g. habitats for flora / fauna)

AS ABOVE

- The Landscape and Visual Amenity of the Environment? (e.g. building seen from the coast, vegetation clearance / earthworks)

AS ABOVE

Will these Effects be Significant or Minor, and How can they be Reduced?

AS ABOVE

- Any Archaeological Sites, Historic Buildings, Notable Trees, or any other Area with a Recognised Value? (e.g. recreation or scientist area or site)

N/A

Will these Effects be Significant or Minor, and How can they be Reduced?

N/A

- Waterways in the Area?

N/A

Will these Effects be Significant or Minor, and How can they be Reduced?

N/A

- Any Existing or Potential Natural Hazards? (e.g. flooding, slips)

N/A

Will these Effects be Significant or Minor, and How can they be Reduced?

N/A

Far North District Council

WILL YOUR PROPOSAL INVOLVE THE:

- Discharge of Contaminants Into the Environment — Yes / No
  If yes, please describe

- Use of Hazardous Substances or Hazardous Installations — Yes / No
  If yes, please describe

CONSULTATION WITH POTENTIALLY AFFECTED PARTIES

Where the District Plan(s) provides, and / or where Council deems it necessary, you may be required to undertake consultation with any parties who may be affected by your proposal, to obtain their written approval consenting to your proposal. As a guideline, Council generally requires written consents from all adjoining landowners and a local Iwi representative.

- Have you discussed your Proposal with People who may be affected by your Proposal? — Yes / No
  If yes, please list those people

- Have any People Given Their Written Approval? — Yes / No
  If yes, you will need to include these as part of your consent

PROPOSED APARTMENT BUILDING AT

Wallace Lane, Paihia

August 2007

ASSESSMENT OF ENVIRONMENTAL EFFECTS AND STATUTORY ANALYSIS

1.0 INTRODUCTION

This report has been prepared in relation to an application by Ormiston Project Management Limited on behalf of Paihia Ltd, which seeks to gain approval for a residential development at Wallace Lane, 8 School Road, Paihia.

This assessment of environmental effects (AEE) has been prepared in accordance with the requirements of Section 88 of and Schedule 4 to the Resource Management Act 1991. It is intended to provide the information necessary for a full understanding of the activity for which consent is sought and any actual or potential effects the proposal may have on the environment.

To this end, this AEE contains the following information:

a) A description of the proposal;
b) A description of the site and the surrounding locality;
c) An outline of the reasons why resource consent is required;
d) An assessment of the effects of the activity on the environment;
e) An analysis of the provisions of the Resource Management Act 1991 and the district plans which are relevant to the application; and
f) Conclusions.

Appendices:

1. Architectural Plans
2. Perspectives
3. Traffic Report
4. Geotechnical and Civil Report
5. Survey
6. Acoustic Engineer Report
7. Certificate of Title

2.0 THE PROPOSAL

The applicant seeks consent to construct a new apartment building on a site at 8 School Road, Wallace Lane, Paihia [Lot 3 DP 44530]. The development contains a car parking level at grade, and an additional 6 residential levels containing 5 apartments. The apartments are served by a private elevator and stair tower.

Each apartment has a deck and at least 3 bedrooms, with living areas, kitchen, study, and bathroom and storage rooms. The top level apartment is a double level apartment with 4 bedrooms, decks and bathroom, study, living and storage areas.

The ground level contains the main entrance to the building, as well as a car park, rubbish room, landscaped planters and letterboxes. Vehicles access the garage through a secure door off Wallace Lane.

The apartment building will be constructed with concrete, masonry and steel construction. The principle cladding will be natural sandstone tiling, as well as significant amounts of glass, concrete and timber.

The site is designated commercial and the building has been designed within the planning requirements of that zone. Resource consent is needed in respect to infringements to the width of the access way [Wallace Lane].

The proposed development seeks to contribute to the existing urban form of Paihia, and take advantage of a very steep site and significant views.

The proposal adheres to the planning controls of the zone in which it is located – the Commercial Zone. The details and means of compliance are outlined as below.

3.0 THE SITE AND LOCALITY

The Site

The site lies within the Commercial Zone of Paihia, in Zone Map 89. The site is surrounded on all sides by properties zoned commercial. The site is accessed via Wallace Lane, and is steep site with an easterly aspect.

There are significant views from the site to wards Russell. The site is steep and currently has limited or no vegetation. The site has been subject to slips in the past, but the site is now stable. A geotechnical report and survey has been conducted on the site, please see the appendices.

The Locality

The site lies within the commercial zone of Paihia and as such has close proximity to the urban and shopping centre of Paihia. The site is located within 150m of the intersection of Marsden and School Roads, and the shorefront.

4.0 REASONS WHY RESOURCE CONSENT IS REQUIRED

Consents will be required in terms of the standards for development under the rules in Chapter 7 Section 7.7, Chapter 14 of the Far North District Council Revised Proposed District Plan. The following matters of consent are required for this proposal:

- Rule 14.1.6.1.2(b) of the District Plan – For the Commercial and Industrial Zones, the access carriageway from the road to any parking or loading space shall be 3m wide for one-way operation, and 6m for two-way operation. In respect to the proposal outlined, the existing access will not allow compliance with this rule. As such, the proposal requires resource consent for a **restricted discretionary** activity.

The analysis, Assessment of Effects, District Plan matters and recommendations of this infringement is outlined in the attached report *'Proposal for a Residential Development, Lot 3 Wallace Lane, Paihia: Traffic Impact Assessment'* carried out by Traffic Planning Consultants Ltd.

5.0 COMPLIANCE OF PROPOSAL WITH ZONING RULES

As mentioned above, the site lies within the Commercial Zone. The commercial zone outlines the following Zone Rules which any proposal must comply with. The proposal in question does comply with all rules, except that to do with access as outlined above.

7.7.5.1 Permitted Activities

(a) The nature of the building, a residential apartment building, generally comply with the permitted activities set out in Rules 7.7.5.1.1 to 7.7.5.1.9, and with the permitted activities set out in Part 3 of the Plan – District Wide Provisions, except where the proposal infringes Rule 14.1.6.1.2. This is addressed above.

7.7.5.1.2 Building Height

The building height for this site as it lies in Zoning Map 89 is 10.0m. The building complies with this rule as shown in the attached architectural plans. A 10.0m rolling height limit taken from information from the attached survey was applied to the design and the building envelope along all areas complies with this rule.

7.7.5.1.3 Sunlight

This Rule does not apply as the site does not adjoin any site that is Residential, Coastal Residential, Russell Township, Coastal Living or Rural Living zoned.

7.7.5.1.4 Visual Amenity & Environmental Protection

(a) Rule 7.7.5.1.4(a) does not apply as the site does not adjoin any zone except for the Commercial Zone

(b) As shown on the attached architectural plan, the building is set back 4.1m from the access boundary, and there are landscaped planters making up 50% of the available area or what equates to 53m2. *NB. The landscape design for the planters will be designed by a landscape professional and submitted with the plans at lodgement time.*

(c) The landscaping within the allotted areas, will be maintained, replanted and replaced where and if necessary during the life of the building, as per the a Landscape Plan. *NB. The landscape design for the planters will be designed by a landscape professional and submitted with the plans at lodgement time.*

7.7.5.1.5 Setback from Boundaries

This rule does not apply in terms of the veranda provision, as there is no 'Pedestrian Frontage' as per the Zone Map.

7.7.5.1.6 Noise Mitigation for Residential Activities

As per council requirements, please see the attached report *'Acoustic Design Report: Wallace Lane Apartments'* prepared by Golder Associates. This addresses the concerns of this rule as it applies to the proposed development.

7.7.5.1.7 Traffic Intensity

The Traffic Intensity Factor [TIF] of the proposed development will equal 50 movements per day, based on 10 movements per standard residential unit. In addition, Wallace Lane serves an additional 5 dwellings with a combined TIF of 50 movements per day. Please see the attached report *'Proposal for a Residential Development, Lot 3 Wallace Lane, Paihia: Traffic Impact Assessment'* for further analysis.

7.7.5.1.8 Keeping Of Animals

As this site and proposed development is to be a residential activity, the site will not be used for factory farming, boarding or breeding kennel or cattery.

7.7.5.1.9 Noise

As per council requirements, please see the attached report *'Acoustic Design Report: Wallace Lane Apartments'* prepared by Golder Associates. This addresses the concerns of this rule as it applies to the proposed development.

7.0 CONCLUSIONS

The applicant seeks consent to construct a new apartment building on a site at 8 School Road, Wallace Lane, Paihia [Lot 3 DP 44530]. The development contains a car parking level at grade, and an additional 6 residential levels containing 5 apartments. The apartments are served by a private elevator and stair tower.

It is considered that any potential adverse effects on the surrounding environment will be mitigated by measures incorporated into the proposed development, including proposed changes to the access way, and landscaping elements. Further, it is considered that relevant objectives and policies of the District Plan will not be compromised by the development.

It is thus considered that the proposed development is consistent with the purpose and principles of Part II of the Resource Management Act 1991. It is concluded that the proposal satisfies all matters that the consent authority is required to apply in terms of the sections 93, 94 and 104 of the Act and that the application can be granted consent on a non-notified basis.

Attention: Mr Daiman Otto

Dear Mr Otto

Acoustic Design Report - Wallace Lane Apartments, Paihia

Introduction

It is proposed to construct a seven-storey residential apartment development at on Wallace Lane, Paihia on land zoned for commercial use.

Golder Kingett Mitchell (Golder Associates (NZ) Ltd) has been commissioned to provide an Acoustic Design Report, to review the building design for compliance with the relevant noise standards and where necessary identify appropriate acoustic controls to ensure compliance.

Design Standards

The site is located within an Urban Environment Commercial Zone under the *Far North District Council Revised Proposed District Plan* and the building structure is required to provide a minimum attenuation of 30 dB(A) for bedrooms and 20 dB(A) for all other habitable rooms.

Clause G6 of the New Zealand Building Code (NZBC) sets the following intertenancy performance standards:

- G6.2 - Building Elements which are common between occupancies, shall be constructed to prevent undue noise transmission from other occupancies or common spaces, to the habitable spaces of household units;
- G6.3.1 - The Sound Transmission Class (STC) of walls, floors and ceilings, shall be no less than 55; and

- G6.3.2 - The Impact Insulation Class (IIC) of floors shall be no less than 55.

Acoustic Design Assessment

District Plan Compliance

Whilst the detailed structural design has yet to be completed, the external walls are likely to be constructed from either filled concrete blocks or pre-cast panels, although the upper level may be constructed using timber stud walls.

Façade attenuation of 30 dB(A) can be readily achieved through virtually all common building constructions, with the possible exception of timber weatherboard cladding. The only elements of the building where this performance cannot be achieved without specific acoustic treatments are windows and doors.

The use of 4 mm float glass in standard frames will provide at least 20 dB(A) attenuation and will therefore be acceptable in all windows other than bedrooms.

Due to the extensive areas of glazing in the bedrooms, all openable bedroom windows and balcony doors need to be fitted a minimum of 10 mm float glass or 6.76 mm PVB laminate glass with rubber compression seals capable of achieving an airtight closure. It is not possible to achieve an effective acoustic seal with sliding doors and they should not, therefore, be used for the bedrooms.

In most cases, the apartment roof will be the floor slab of the apartment above and will readily provide at least 30 dB(A) attenuation. There will be roof areas on of the top apartment that will not be deck areas and may be constructed from other roofing materials. However, even lightweight metal clad roofs with 10 mm plasterboard ceilings below and insulation batts in the cavity can be expected to provide attenuation of at least 30 dB(A).

However, any ceiling penetrations for recessed lighting etc in the bedrooms of the top apartment should, unless otherwise advised by the supplier, be limited in area to the equivalent of 1 x 130 mm diameter hole for every 8 m^2 of ceiling, or enclosed, or otherwise treated, to maintain the acoustic performance of the ceiling.

As windows open for ventilation will only offer 10-15 dB(A) attenuation, the required façade attenuation can only be achieved with closed windows and all the habitable rooms of all apartments will need to be provided with mechanical ventilation. In order to achieve reasonable internal noise levels, the ventilation systems should be designed to achieve a noise level of no more than:

- L_{eq} 30 dB(A) at 1 m from any diffuser in bedrooms; and
- L_{eq} 35 dB(A) at 1 m from any diffuser in other habitable rooms.

Building Code Compliance

The building design will comprise ground floor parking with single level apartments on the first through fourth floors and a two-storey apartment occupying the upper two levels. All units will be served by a common lift and staircase located in the southern corner of the building. The stairwell and lift are well separated from the habitable

rooms of most apartments, but the lift shaft is adjacent to habitable rooms in the top two apartment. The external decks of each apartment will be located at least partially above the living areas of the unit below.

The NZBC Clause G6 requirements will apply to:

- the STC rating of the walls between the lift shaft and habitable rooms of the top two apartments (forth and fifth levels;
- the STC ratings of the ceiling/floors between the ground level car park & first level apartment, first & second levels, second & third levels, third & fourth levels fourth & fifth levels and between the top of the lift shaft & the sixth level rooms; and
- the IIC ratings of the ceiling/floors between the first and second levels, second and third levels, third and fourth levels and fourth and fifth levels.

An STC 55 rated wall design can be readily with either a timber-framed, filled concrete block or pre-cast concrete panel wall. The preferred wall design should be confirmed to meet the STC 55 rating at the detailed design stage.

The STC rated floor designs can be readily achieved with either solid 150 mm concrete slabs or hollow core type slabs with a minimum 60 mm topping. If lighter weight floor designs such as rib and infill are used, a 10 mm plasterboard ceiling will normally be sufficient to achieve the overall floor/ceiling STC 55 rating. However, as noted above any ceiling penetrations for recessed lighting etc in the bedrooms of the top apartment should, unless otherwise advised by the supplier, be limited in area to the equivalent of 1 x 130 mm diameter hole for every 8 m^2 of ceiling, or enclosed, or otherwise treated, to maintain the acoustic performance of the ceiling.

To meet the IIC criterion, suspended rather than direct fixed plasterboard ceilings will be required in all habitable rooms (not bathrooms) in combination with good quality carpet over rubber waffle underlay. Where hard flooring surfaces are required, a proprietary resilient flooring product should be used and this will also apply to all bathroom and balcony floors apart from the top floor.

There are a number of suitable products on the market that will provide the necessary resilient layer below hard-surfaced areas to achieve the required IIC rating including:

- Gib Sound Barrier for Floors, Winstone Wallboards Ltd, tel 09 633 0100;
- Mapefonic Sound Control System, Mapei New Zealand Ltd, tel 09 921 1994;
- Cladex Acousticork, Construction Trade Supplies Ltd, tel 07 574 0459;
- Enkasonic Sound Control Matting, Acoustic Solutions Ltd, tel 09 236 8076; and
- Acoustibond & Acoustic Underlay, Construction Chemicals, tel 09 273 5444.

It is our understanding that any of the above may be suitable for this building design. However, this should be confirmed with the manufacturer and/or supplier before specifying any one product. It should also be noted that effective performance is dependent upon the correct installation of all components and that depending upon the preferred design, insulation batts may be required in the ceiling cavity to achieve the IIC 55 rating.

Any ceiling penetrations for recessed lighting etc in habitable rooms should be designed to maintain the acoustic performance of the ceiling panel. Unless otherwise advised by the supplier, they should either be limited in area to the equivalent of 1 x 130 mm diameter hole for every 8 m^2 of ceiling, or enclosed, or otherwise treated, to maintain the acoustic performance of the ceiling.

Additional Recommendations for Building Noise Control

The NZBC requirements only apply between apartments, however, to optimise acoustic privacy we would recommend that the STC/IIC 55 ratings also be applied to the floor/ceiling between the two levels of the top apartment.

The NZBC does not address the control of noise from waste water pipes, however, we would recommend following the Building Code of Australia recommendations.

Waste pipes from bathrooms should be contained in ducting located preferably within the bathrooms and duct walls rated to at least STC 30 in bathrooms and STC 45 if they form part of a wall adjacent to a habitable room. It waste piles do penetrate the floor slab and run through the ceiling space of the apartment below, the penetrations must be acoustically sealed and the pipes lagged with 8 kg m^{-2} pipe insulation, which in combination with the ceiling can achieve STC 30 for bathrooms and with insulation batts in the ceiling cavity can achieve STC 45 for other habitable rooms.

We would also recommend that acoustic privacy be optimised through the use of solid core apartment entry doors fitted with acoustic seals to all sides (Raven, Zero or equivalent products), dropping seals on the bottom of the doors would be preferable and should be used if practicable..

Conclusions

In combination with the identified window and door treatments, the external facades of the Wallace Lane apartment building can provide sufficient noise attenuation to comply with the District Plan requirements of 30 dB(A) for bedrooms and 20 dB(A) for all other habitable rooms.

An alternative mechanical ventilation system will be required for all habitable rooms and it is recommended that the system be specified to operate at the identified noise levels to maintain a satisfactory internal noise level.

Design options for the intertenancy walls and floor/ceilings have been identified that will comply with the NZBC STC 55 and IIC 55 performance standards.

Yours sincerely
Golder Kingett Mitchell

TPC TRAFFIC PLANNING CONSULTANTS LTD

PROPOSAL FOR A RESIDENTIAL DEVELOPMENT

LOT 3 WALLACE LANE, PAIHIA

TRAFFIC IMPACT ASSESSMENT

Report Prepared For:
Ormiston Project Management Ltd

Prepared By:
David Philip

August 2007
Reference: 07125
Issue B

1.0 INTRODUCTION

This assessment examines and describes the traffic planning effects of a proposal to construct a five-unit residential development on Lot 3 of Wallace Lane, with vehicle access via School Road in Paihia. The assessment specifically describes the existing traffic environment, proposed on-site changes, the traffic effects of the proposal and consideration of relevant District Plan criteria.

The proposal covers the construction and operation of five new residential units with associated vehicle access and parking. Access to and from the proposed development will be via a shared right of way called Wallace Lane which adjoins School Road. A total of 11 on-site parking spaces will be provided for residents of the proposed units.

2.0 EXISTING TRAFFIC ENVIRONMENT

2.1 The Road Network

The subject site is located on the western side of Wallace Lane between two existing residential dwellings. Wallace Lane currently provides a single lane access for four separate dwellings. Two of the four existing dwellings have driveways off of Wallace Lane, adjacent to School Road. The other two dwellings are located at the southern end of Wallace Lane.

The Wallace Lane access way is sealed to a width of between 3.2 metres and 3.6 metres. The form of the access way is not fully defined within the adjacent road reserve on School Road due partly to the close proximity of the vehicle access for the property immediately east of Wallace Lane. The current layout of the access way at its connection with School Road allows an ingress vehicle to wait off of the adjacent traffic lane in the event a vehicle is approaching School Road on Wallace Lane.

School Road is designated a collector road in the Far North District Plan (Revised Proposed). The carriageway width varies along the length of the road and is in the order of 6.5 metres wide in the vicinity of Wallace Lane. Street parking on School Road is prohibited through the use on no-stopping carriageway markings in the vicinity of Wallace Lane and the intersection with Marsden Road. A footpath is provided on the northern side of School Road.

School Road connects with Marsden Road in the form of a priority controlled intersection. The intersection does not included dedicated turning bays, although the carriageway is generally wide enough to allow through traffic to pass vehicles waiting to turn into School Road. Marsden Road forms a section of State Highway 11 (SH 11) and is designated a strategic link in the District Plan. Street parking is controlled on the western side of Marsden Road with indented parking provided on the eastern side. Footpaths are provided on both sides of Marsden Road.

The posted speed limit on roads in the near vicinity of the subject site is 50km/h. Typical traffic volumes are quite variable between seasons due to the influence of tourism in the area. A gauge of current traffic volumes on Marsden Road can be

provided by a Transit New Zealand count site on SH 11, some four kilometres to the south of School Road. The annual average daily traffic flow at the count site is in the order of 4,000 vehicles per day, combined for two-way movement.

2.2 Road Safety

Information has been sourced from the Land Transport New Zealand "Crash Analysis System" for the five year period, January 2002 to December 2006, to identify relevant crash data for the area adjacent to the subject site. Five separate crashes were reported in the vicinity of the Marsden Road/School Road intersection, with one of the crashes involving minor injury to a cyclist.

Three of the reported crashes involved turning at or near the intersection, one crash involved a vehicle making a u-turn to the south of School Road, and the final crash was a nose-to-tail type incident on the School Road approach to Marsden Road. The type and frequency of reported crashes are considered typical for a priority controlled intersection, given the level of activity in the immediate area.

Overall, the review of reported crashes in the vicinity of the subject site does not highlight any specific traffic safety problem which would be exacerbated by the proposal.

3.0 THE PROPOSAL

3.1 Description

The proposal involves the construction of an apartment block comprising five separate residential units. A total of 11 parking spaces will be provided in a basement level for residents of the development. The parking area will gain access onto Wallace Lane and then onto School Road. The proposal includes upgrade works on Wallace Lane to better facilitate two-way movement between School Road and the proposed development vehicle access.

The subject property is zoned for commercial use in the District Plan, albeit other properties on the shared access way are residential in nature.

3.2 Traffic Generation

The traffic generation characteristics of the proposal will be largely dependent on the day to day use of the five residential units. Residential activity would typically generate vehicle movements during commuter peak periods associated with employment and education type activities. The location and type of residential development proposed may lead some units being used on a non-continuous basis, with more intense use during summer and holiday periods. Such an outcome would obviously generate fewer vehicle trips when assessing the development as a whole.

Notwithstanding this, it is considered reasonable to expect a residential unit to generate between seven and 10 vehicle trips per day and an average of one trip per hour during

the peak generation period. On this basis, the development could be expected to generate up to 50 trips per day and in the order of five trips during the peak hour of generation.

3.3 Vehicle Access

Vehicle access to and from the subject property will be via Wallace Lane which is a private access way, currently serving four separate properties. The access way is currently sealed with a usable carriageway width of between 3.2 metres and 3.6 metres. The available width limits vehicle movement to one way along the fully length of some 110 metres, with no formal passing bay. The layout of the sealed area at the eastern end of Wallace Lane provides sufficient space for an ingress vehicle to wait within the road reserve, without affecting traffic on School Road while another vehicle travels eastbound on the access way.

Wallace Lane is located approximately 25 metres west of Marsden Road. Sight lines between approaching traffic and vehicles exiting Wallace Lane are in the order of 30 metres to the east (towards Marsden Road) and 70 metres to the west. The available sight lines are considered acceptable for a low volume driveway onto a collector road, based on likely vehicle operating speeds on both approaches.

The proposed development will increase the frequency of vehicle movements on Wallace Lane and as such it is appropriate that the access way be upgraded to better accommodate the potential for conflicting two-way movements. While the shared access will essentially service nine separate dwellings, including the proposed development, it is noted that two existing dwellings have driveways immediately adjacent to School Road. The surveyed boundary lines on Wallace Lane indicate the access reserve is in the order of 6.1 metres, albeit that a number of existing features restrict the potential access width. The driveway for the proposed development will be located approximately 70 metres south of the School Road carriageway.

A desirable outcome for the upgraded access way would be two-way operation along the full length. Guidance on Council requirements for a two way access way is provided in Section 14 and Appendix 7B of the District Plan. On the basis that the subject site is zoned for commercial use, the required access way is 6.0 metre wide carriageway within an 8.0 meters wide road boundary. This desirable standard is not achievable within the available access reserve.

If the access way was assessed on the basis of residential use, as is case at present and proposed, Councils' required minimum standard for a private access is a 5.0 metre carriageway within a 7.5 metre wide legal boundary of reserve. A carriageway width of 5.0 metres can theoretically be achieved within the current access reserve. However, the extent of physical works required to achieve 5.0 meters is considered undesirable. The key constraint is an existing pinch-point between a large power pole and a high retaining wall.

A practical access solution has been developed to allow two-way movement to operate on Wallace Lane through the use of isolated widening. The proposed access upgrade is outlined in the attached drawing and incorporates the following elements.

- Widening of the existing access way immediately east of School Road to provide an improved passing bay for ingress and egress vehicles to pass. This passing bay is required to allow an ingress vehicle to wait off of School Road while an egress vehicle approaches. Alternatively an ingress vehicle can pass a stationary vehicle waiting to turn onto School Road.

- Provision of a passing bay immediately east of the large power pole on the northern side of the access way. The proposed passing bay will increase the usable carriageway to approximately 5.5 metres wide over a distance of eight metres, with five metre long tapers. This passing bay will be located close to the existing vertical crest on the access way.

- Widening of the access carriageway by the driveway to the proposed development. The widening will increase the carriageway to approximately 4.5 metres wide over a distance of at least 15 metres. The proposed widening will improve ingress and egress movements associated with the development and permit opposing vehicle to pass each other within the development driveway.

- Lighting will be incorporated into the access upgrade to improve safety and general amenity at night. The level and type of lighting will be designed to the satisfaction of Council and in consultation with immediate neighbours.

All widening works will be carried out to the satisfaction of the Council. In particular, the proposed passing bay adjacent to School Road may be fully within the road reserve due to the wide road boundary at that location.

4.0 DISTRICT PLAN PROVISIONS

4.1 Parking

Part 14 of the District Plan refers to Appendix 7C of the Plan to determine the minimum number of parking spaces required for various activities. Two parking spaces are required for each residential unit. The proposal to provide 11 parking spaces for the development exceeds the minimum requirement of 10 spaces.

Parking areas should also be of sufficient space to facilitate efficient movement to and from individual spaces. The parking spaces within the proposed development will be 2.5 metres wide with approximately 7.6 metres of manoeuvring space across the aisle. Appendix 7D of the District Plan outlines Council requirements for the dimensions of parking and manoeuvring areas. The minimum manoeuvring space required for 2.5 metre wide parking spaces provided for residential use is 6.7 metres. Parking spaces which are adjacent to an end wall have an additional 300mm clearance to improve manoeuvring and allow for car door opening.

A number of parking spaces will involve indirect manoeuvring when either entering o leaving the development. For example, drivers accessing parking spaces 1 and 7 may be required to undertake unconventional manoeuvring movements to complete entry to the

spaces. Operating constraints of this nature, despite compliance with the relevant Council manoeuvring standards, are typical for the scale of parking area proposed. Regular users of the parking area will become accustomed to a preferred sequence of manoeuvres to enter and exit parking spaces.

Overall, the proposed on-site parking arrangements are considered acceptable for the proposed activity.

4.2 Loading and Servicing

The loading and servicing requirements of residential activities are generally minor in nature, typically limited to occasional courier delivery and very occasional removals truck. Courier deliveries can take place with vehicles waiting within the parking area while delivery is made. The demand for larger removal vehicles will be very infrequent and specific arrangements can be made with affected parties.

The servicing arrangements for the proposal are considered acceptable.

4.3 Vehicle Access

Councils' requirements for vehicle access to sites are outlined in Section 14.1.6.1.2 of the District Plan. Various rules detail the required standards for criteria related to the safe and efficient access to and from sites. These rules are discussed below, as they relate to the current application.

(b) As mentioned previously, the desired 6.0 metre wide access way for commercial zones cannot be achieved within the current site constraints. Sections of carriageway widening incorporating passing bays are proposed to accommodate two-way vehicle movement to and from School Road.

(c) The proposed access way will not comply with the required access width, as stated in Appendix 7B of the District Plan. The road reserve on School Road is significantly wider than the usable carriageway. The desired low-gradient platform adjacent to the road boundary is not feasible due to a steeper gradient on the existing access way.

(d) The subject site complies with the restriction of no more than two vehicle crossing per site and maximum width of 6.0 metres.

(e) The access way connects with a collector road within 90 metres of its intersection with an arterial road. The access way currently exists and hence the location cannot be altered. The level of traffic on School Road at present and the proposed demand on the Wallace Lane access way are not considered significant. The predicted effect on the operation of School Road or the intersection with Marsden Road is considered negligible.

(f) The parking area and driveway within the proposed development will not generate reverse manoeuvres to or from the adjacent road.

(h) As noted previously, proposed widening on Wallace Lane, at the connection with School Road will provide sufficient space to allow two opposing vehicle to pass without affected through traffic on School Road.

(j) The proposed upgrade to the existing access way will be either sealed or concreted.

(k) The access way serving the proposed development is relatively straight.

(l) The formal passing bay proposed approximately mid way between School Road and the subject site will be 5.5 metres wide in accordance with the District Plan requirement. The passing bay will be 8.0 metres long with 5.0 metre long tapers at both ends. The proposed passing bay dimensions are considered acceptable given the length of access way and the likely vehicle speeds on the access.

(m) The passing bay is located in close proximity to the vertical crest mid way along the access way.

(n) The proposed upgrade to the access way will provide a suitable passing bay and provision to accommodate opposing vehicles at the road boundary.

(o) The remaining legal access way, not incorporated in carriageway widening will be landscaped to the satisfaction of Council.

(p) The vehicle access way will also serve pedestrian usage.

(q) The on-going maintenance of the upgraded access way will be addressed by agreement between the current owners.

(r) Appropriate measures will be incorporated in to the design of the upgraded access way to address stormwater runoff.

(s) The access way will serve a total of nine residential units, including the five units proposed. The formation of a public road, as indicated in (t) is not considered appropriate.

Overall, the access arrangements proposed for the subject site are considered appropriate given the current physical constraints.

5.0 TRAFFIC IMPACTS OF THE PROPOSAL

The traffic related impacts of the proposal centre on;

- the impacts of traffic generated by the development,
- the impacts of constrained vehicle access arrangements, and
- the impacts of construction related traffic.

5.1 Impacts of Traffic Generated by the Proposal

The level of traffic generated by the proposal will likely vary seasonally due to the type of residential units proposed and the potential for non-continuous use. Typically, each residential unit can be expected to generate in the order of 10 vehicle movements per day and one vehicle movement during the peak hour. The five residential units proposed may generate up to 50 vehicle movements per day and five movements during the peak hour of generation.

It is anticipated that most if not all vehicle tips generated by the proposal will travel via the intersection of Marsden Road and School Road, to the east of Wallace Lane. Daily traffic generation would be expected to be split evenly between ingress and egress movements, resulting in 25 vehicle movements onto Marsden Road and 25 movements from Marsden Road into School Road. The directional distribution of generated trips, once on Marsden Road will vary although could be expected to be relatively even on average. The predicted increase in daily traffic at the intersection of Marsden Road and School Road is therefore between 10 and 15 vehicles for each of the four turning movements in and out of School Road. The predicted peak hour generation of five additional trips could be expected to increase each of the turning movements by one or two vehicles per hour.

Vehicles accessing the proposal will only interact with pedestrians walking on Wallace Lane. Pedestrians on School Road will typically be on the footpath on the northern side of the road, opposite Wallace Lane.

Analysis of the relevant crash records does not indicate a traffic safety problem in the vicinity of the site.

Overall, it is considered that the estimated levels of traffic generated by the proposed development can be accommodated on the road network without compromising its function, capacity or safety. On this basis, the effects of the proposal are no more than minor.

5.2 Impacts of Proposed Access Arrangements

The existing access way between School Road and the proposed development will be upgraded to better accommodate two-way vehicle movement. Physical and boundary constraints prevent the provision of a suitable two-way link along the full length of the access way. However a series of carriageway widening sections will permit acceptable two-way operation, allowing for likely traffic generation.

The proposed upgrade of the access way in the vicinity of the School Road boundary will improve the general convenience of drivers accessing Wallace Lane and decrease the potential for waiting vehicles affecting the operation of School Road.

Overall, the proposed access arrangements are considered acceptable for the intended activity. The effects of additional traffic movements on current users of the access are considered negligible, subject to the suggested upgrade measures.

5.3 Impacts during Construction

The construction works are expected to occur over a period of approximately 12 months. The subject site will introduce various challenges relating to construction. The key areas to be defined, from a traffic safety and operation perspective are suitable access and loading arrangements, maintaining existing vehicle movements on Wallace Lane, materials storage, and parking for construction staff.

The construction methodology and proposed temporary traffic management of related vehicle movements will be defined in conjunction with a preferred Contractor. The controls and measures proposed will be agreed with Council through submission of a construction traffic management plan (TMP).

Construction traffic effects will in part be related to the number of truck movements likely during the construction period. There is also traffic generated by builders and sub-contractors working at the site.

Deliveries to the site during the construction period will consist of concrete, timber, exterior joinery and cladding together with interior finishing materials. The number of truck movements associated with the construction will vary from day to day although, on average, it is estimated that there will be up to a maximum of 10 truck movements per day over the construction period.

There will also be traffic movements associated with the various trades required during the construction period. The number of traffic movements will vary from week to week over the course of the construction period.

The traffic effects during construction will be able to be accommodated on the road network without noticeably impacting on other road users.

6.0 DISTRICT PLAN ASSESSMENT CRITERIA

Section 14.1.7 of the District Plan outlines a series of assessment criteria for assessing proposed developments.

6.1 Section 14.1.7.1 Parking

The proposed car parking provision exceeds the minimum requirement outlined in Appendix 7C of the District Plan. The proposed parking and manoeuvring dimensions exceed the minimum standards outlined for residential activities in Appendix 7D of the Plan.

Overall the proposal is considered to be consistent with the parking assessment criteria.

6.2 Section 14.1.7.2 Vehicle Access

(a) adequacy of sight distances available at the access location

The sight distances available to and from vehicles accessing Wallace Lane are considered acceptable for a low volume driveway on a collector road. The vehicle operating speeds on both approaches will be influenced by the adjacent road geometry, being an intersection to the east and a series of horizontal curves to the west.

(b) any current traffic safety or congestion problems in the area

A review of the available crash history for the past five years does not highlight any notable road safety concern in the immediate vicinity of the subject site. Existing traffic flows and general operation in the area are very seasonal. Peak demand periods typically generate minor levels of queuing and delay for movements to and from School Road.

(c) any foreseeable future changes in traffic patterns in the area

Traffic flows on the surrounding roads will increase over time as a result of development in the area as well as further afield. This may necessitate changes to the on-street management in the area. Further growth in traffic volumes will likely occur on a gradual basis without the introduction of significant changes.

(d) possible measures or restrictions on vehicle movements in and out of the accesses

The level of traffic generation predicted for the proposed development, combined with existing use does not highlight any notable concern which may necessitate the introduction of access restrictions.

(e) the adequacy of the engineering standards proposed and the ease of access to and from, and within, the site

The extent of carriageway widening on the shared access way is limited by adjacent legal boundaries and various existing physical constraints including a large power pole and significant retaining wall. The proposed access upgrade measures are considered sufficient to permit acceptable operation on the access way. The car parking are within the proposed development complies with Council standards and will be primarily used by regular users.

(f) the provision of access for all persons and vehicles likely to need access to the site, including pedestrian, cycle, disabled, vehicular

Given the location of the development and the nature of the local area, it is likely that many local trips will be made on foot rather than by car. The access way will be used by pedestrians and potentially cyclists. All user groups will have to share the access way, be it widened sections of carriageway or sections of resurfaced carriageway with adjacent berm. The development includes a separate pedestrian access remote from the vehicle driveway. The upgrade of the access way will include lighting to enhance night time operation and safety.

(g) the provision made to mitigate the effects of stormwater runoff, and any impact of roading and access on waterways, ecosystems, drainage patterns or the amenities of adjoining properties

The proposed upgrade of the access way will increase the sealed area and hence influence current stormwater runoff patterns. Mitigating measures will be designed and agreed with Council to avoid any related adverse effects.

Overall the proposal is considered to be consistent with the Councils' assessment criteria for vehicle access.

7.0 CONCLUSIONS

Based on the assessment of traffic effects described in this report, the following conclusions can be made in respect of the proposal to construct five residential units on Lot 3 of Wallace Lane in Paihia.

- The level of additional traffic generated by the proposal will typically be in the range of 50 vehicle trips per day, when all units are in use. A comparable peak hour traffic generation may be five vehicle trips per hour.

- The proposed on-site parking area exceeds the requirements of the District Plan in terms of provision and dimensions.

- The proposal includes a series of upgrade measures for the existing vehicle access. While the proposed access does not meet Council standards based on the current zoning or number of separate dwellings, the safety and operation of the access are considered acceptable.

- The traffic generated by the proposal can be accommodated on the adjacent road network with little or no noticeable effect.

It is concluded that from a traffic perspective, the proposal will have no more than a minor impact on the safety, function, and capacity of the adjacent road network.

Attention: Mr Daiman Otto

Dear Mr Otto

Acoustic Design Report - Wallace Lane Apartments, Paihia

Introduction

It is proposed to construct a seven-storey residential apartment development at on Wallace Lane, Paihia on land zoned for commercial use.

Golder Kingett Mitchell (Golder Associates (NZ) Ltd) has been commissioned to provide an Acoustic Design Report, to review the building design for compliance with the relevant noise standards and where necessary identify appropriate acoustic controls to ensure compliance.

Design Standards

The site is located within an Urban Environment Commercial Zone under the *Far North District Council Revised Proposed District Plan* and the building structure is required to provide a minimum attenuation of 30 dB(A) for bedrooms and 20 dB(A) for all other habitable rooms.

Clause G6 of the New Zealand Building Code (NZBC) sets the following intertenancy performance standards:

- G6.2 - Building Elements which are common between occupancies, shall be constructed to prevent undue noise transmission from other occupancies or common spaces, to the habitable spaces of household units;
- G6.3.1 - The Sound Transmission Class (STC) of walls, floors and ceilings, shall be no less than 55; and

- G6.3.2 - The Impact Insulation Class (IIC) of floors shall be no less than 55.

Acoustic Design Assessment

District Plan Compliance

Whilst the detailed structural design has yet to be completed, the external walls are likely to be constructed from either filled concrete blocks or pre-cast panels, although the upper level may be constructed using timber stud walls.

Façade attenuation of 30 dB(A) can be readily achieved through virtually all common building constructions, with the possible exception of timber weatherboard cladding. The only elements of the building where this performance cannot be achieved without specific acoustic treatments are windows and doors.

The use of 4 mm float glass in standard frames will provide at least 20 dB(A) attenuation and will therefore be acceptable in all windows other than bedrooms.

Due to the extensive areas of glazing in the bedrooms, all openable bedroom windows and balcony doors need to be fitted a minimum of 10 mm float glass or 6.76 mm PVB laminate glass with rubber compression seals capable of achieving an airtight closure. It is not possible to achieve an effective acoustic seal with sliding doors and they should not, therefore, be used for the bedrooms.

In most cases, the apartment roof will be the floor slab of the apartment above and will readily provide at least 30 dB(A) attenuation. There will be roof areas on of the top apartment that will not be deck areas and may be constructed from other roofing materials. However, even lightweight metal clad roofs with 10 mm plasterboard ceilings below and insulation batts in the cavity can be expected to provide attenuation of at least 30 dB(A).

However, any ceiling penetrations for recessed lighting etc in the bedrooms of the top apartment should, unless otherwise advised by the supplier, be limited in area to the equivalent of 1 x 130 mm diameter hole for every 8 m^2 of ceiling, or enclosed, or otherwise treated, to maintain the acoustic performance of the ceiling.

As windows open for ventilation will only offer 10-15 dB(A) attenuation, the required façade attenuation can only be achieved with closed windows and all the habitable rooms of all apartments will need to be provided with mechanical ventilation. In order to achieve reasonable internal noise levels, the ventilation systems should be designed to achieve a noise level of no more than:

- L_{eq} 30 dB(A) at 1 m from any diffuser in bedrooms; and
- L_{eq} 35 dB(A) at 1 m from any diffuser in other habitable rooms.

Building Code Compliance

The building design will comprise ground floor parking with single level apartments on the first through fourth floors and a two-storey apartment occupying the upper two levels. All units will be served by a common lift and staircase located in the southern corner of the building. The stairwell and lift are well separated from the habitable

rooms of most apartments, but the lift shaft is adjacent to habitable rooms in the top two apartment. The external decks of each apartment will be located at least partially above the living areas of the unit below.

The NZBC Clause G6 requirements will apply to:

- the STC rating of the walls between the lift shaft and habitable rooms of the top two apartments (forth and fifth levels;
- the STC ratings of the ceiling/floors between the ground level car park & first level apartment, first & second levels, second & third levels, third & fourth levels fourth & fifth levels and between the top of the lift shaft & the sixth level rooms; and
- the IIC ratings of the ceiling/floors between the first and second levels, second and third levels, third and fourth levels and fourth and fifth levels.

An STC 55 rated wall design can be readily with either a timber-framed, filled concrete block or pre-cast concrete panel wall. The preferred wall design should be confirmed to meet the STC 55 rating at the detailed design stage.

The STC rated floor designs can be readily achieved with either solid 150 mm concrete slabs or hollow core type slabs with a minimum 60 mm topping. If lighter weight floor designs such as rib and infill are used, a 10 mm plasterboard ceiling will normally be sufficient to achieve the overall floor/ceiling STC 55 rating. However, as noted above any ceiling penetrations for recessed lighting etc in the bedrooms of the top apartment should, unless otherwise advised by the supplier, be limited in area to the equivalent of 1 x 130 mm diameter hole for every 8 m^2 of ceiling, or enclosed, or otherwise treated, to maintain the acoustic performance of the ceiling.

To meet the IIC criterion, suspended rather than direct fixed plasterboard ceilings will be required in all habitable rooms (not bathrooms) in combination with good quality carpet over rubber waffle underlay. Where hard flooring surfaces are required, a proprietary resilient flooring product should be used and this will also apply to all bathroom and balcony floors apart from the top floor.

There are a number of suitable products on the market that will provide the necessary resilient layer below hard-surfaced areas to achieve the required IIC rating including:

- Gib Sound Barrier for Floors, Winstone Wallboards Ltd, tel 09 633 0100;
- Mapefonic Sound Control System, Mapei New Zealand Ltd, tel 09 921 1994;
- Cladex Acousticork, Construction Trade Supplies Ltd, tel 07 574 0459;
- Enkasonic Sound Control Matting, Acoustic Solutions Ltd, tel 09 236 8076; and
- Acoustibond & Acoustic Underlay, Construction Chemicals, tel 09 273 5444.

It is our understanding that any of the above may be suitable for this building design. However, this should be confirmed with the manufacturer and/or supplier before specifying any one product. It should also be noted that effective performance is dependent upon the correct installation of all components and that depending upon the preferred design, insulation batts may be required in the ceiling cavity to achieve the IIC 55 rating.

Any ceiling penetrations for recessed lighting etc in habitable rooms should be designed to maintain the acoustic performance of the ceiling panel. Unless otherwise advised by the supplier, they should either be limited in area to the equivalent of 1 x 130 mm diameter hole for every 8 m^2 of ceiling, or enclosed, or otherwise treated, to maintain the acoustic performance of the ceiling.

Additional Recommendations for Building Noise Control

The NZBC requirements only apply between apartments, however, to optimise acoustic privacy we would recommend that the STC/IIC 55 ratings also be applied to the floor/ceiling between the two levels of the top apartment.

The NZBC does not address the control of noise from waste water pipes, however, we would recommend following the Building Code of Australia recommendations.

Waste pipes from bathrooms should be contained in ducting located preferably within the bathrooms and duct walls rated to at least STC 30 in bathrooms and STC 45 if they form part of a wall adjacent to a habitable room. It waste piles do penetrate the floor slab and run through the ceiling space of the apartment below, the penetrations must be acoustically sealed and the pipes lagged with 8 kg m^{-2} pipe insulation, which in combination with the ceiling can achieve STC 30 for bathrooms and with insulation batts in the ceiling cavity can achieve STC 45 for other habitable rooms.

We would also recommend that acoustic privacy be optimised through the use of solid core apartment entry doors fitted with acoustic seals to all sides (Raven, Zero or equivalent products), dropping seals on the bottom of the doors would be preferable and should be used if practicable..

Conclusions

In combination with the identified window and door treatments, the external facades of the Wallace Lane apartment building can provide sufficient noise attenuation to comply with the District Plan requirements of 30 dB(A) for bedrooms and 20 dB(A) for all other habitable rooms.

An alternative mechanical ventilation system will be required for all habitable rooms and it is recommended that the system be specified to operate at the identified noise levels to maintain a satisfactory internal noise level.

Design options for the intertenancy walls and floor/ceilings have been identified that will comply with the NZBC STC 55 and IIC 55 performance standards.

Yours sincerely
Golder Kingett Mitchell

SITE STABILITY AND SUITABILITY REPORT

For

Lot 3, DP 44530

At

Wallace Lane,
Paihia

For

Ormiston Project Management Limited

Job No: 07-56
Date: June 2007

Level 1 National Bank Building 90 Kerikeri Road, Kerikeri, New Zealand
Telephone: 09 407 3255 Fax: 09 407 3256 Email: pk.engin@xtra.co.nz

Introduction

This report was requested by Daiman Otto from Ormiston Project Management Limited and has been prepared to assess the site stability and suitability for the development of Lot 3, DP 445030 on Wallace Lane, Paihia.

This report assesses the sites in regard to land stability, stormwater flows and wastewater disposal, and has been prepared for the sole use of our clients Ormiston Project Management Limited. It shall not be used, reproduced or copied in any manner, or form without the permission of PK Engineering Limited.

Site Description (refer to included site plan and cross-sections)

This site is located on the east facing slopes of a prominent ridge line which traverses in a north – south direction. The gradients of the slopes start off at approximately 28 to 30 degrees at the upper regions of this lot and reduce down to approximately 20 to 25 in the mid and lower areas.

An old slip scarp is visible on the upper reaches of this site and the slip debris is evident adjacent to the accessway on the lower boundary.

A pedestrian right of way exists on the southern boundary. The entire area is currently covered in grass.

Investigations

Visual Inspection
A thorough walkover of the site and all surrounding slopes was undertaken and geotechnical features relating to site stability and stormwater flows were noted.

Subsurface Investigation (refer to included site plan)
Eight subsurface exploratory augerholes were drilled in the locations shown on the site plan.

The augerholes were drilled down to depths ranging from 1.5 to 3.5 metres. Soil strength measurements (insitu undrained shear strength) were recorded at 0.5 metre intervals.

Scala penetrometer tests were carried out in the base of all eight augerholes to a depth of 5.0 metres or till significant rock was struck.

The logs of the eight auger holes and their associated scala penetrometer logs are shown in Appendix A.

Slope Stability Analysis
Bishops modified slope stability analysis was performed on the anticipated slip planes and factors of safety were evaluated, using the results of the data collected from the site exploratory works.
The results of this analysis can be seen in Appendix B.

Geology

The local geology of the site is comprised of soils derived from the weathering of Waipapa group greywacke and argillite.

The soils which are classified as Marua clay loam are comprised of a layer of yellowish brown clayey topsoil of approximately 2.0 metres depth overlying a layer of clayey silt. The clayey silt layer starts phasing into soft weathered rock at depths from approximately 2.5 metres to 4.0 metres.

The intact rock mass is located immediately below the weathered rock.

Site Stability and Suitability

The stability of the upper slopes are dependant upon the depth of the well weathered greywacke which have been reduced to silty clay. These clays are reasonably sensitive to moisture variations and prone to slippage if they get excessively saturated.

It appears that a large portion of the sensitive clay layer has actually slipped in the past and the angle of repose is now presented by the severly reclining slip scarp.

As a consequence of this the bulk of the central portion of this site now has a lot less slip mass that is prone to circular slip type of failure.

The presence of intact rock mass at the depths of approximately 2.5m at the upper portion of this site also indicates that the volume of unstable material present is significantly less than the site appears to present when looked at from below.

From the information collected for the site investigative work and the analysis it is evident that this lot can be developed provided the following conditions are met.

- Any stormwater trying to enter the upper reaches of this lot must be collected and piped either to a storage and slow release mechanism or piped directly to the shoreline.

- Maximum ground cover must be maintained either by revegetation or providing maximum roof coverage over the area to eliminate any direct rainfall impact on the existing exposed slip faces.

- It is essential that as much of the upper clay layer as possible be removed for any proposed building on this site. Ideally, a stepped building structure, the foundations of which are located on the weathered rock would suit this site. All foundations must be piled down to the intact rock mass.

- All cut faces and slip scarps on this site must be carefully retained during the construction stage to prevent any impact upon the buildings on the neighbouring sections. It is crucial that a contiguous concrete pile wall be erected along the southern and northern boundary prior to undertaking any excavations exceeding 1.2 metres in height. Any such contiguous pile wall should have a capping beam on top and be left to cure for a minimum of 10 days prior to the excavation.

- All such retaining wall structures and foundations must be designed by a suitably qualified and experienced Chartered Professional Engineer.

- The following soil strengths parameter shall be used in the design of all foundations and retaining wall structures on this site.

  Upper Clay Layer

Bulk density	= 18 kNm3
Internal angle of friction of clay	= 25 degrees
Cohesion	= 18 kPa.

  Weathered Rock Layer

Bulk density	= 20 kNm3
Internal angle of friction of clay	= 40 degrees
Cohesion	= 0 kPa

  Intact Rock Mass

Bulk density	= 25 kNm3
Internal angle of friction of clay	= 50 degrees
Cohesion	= 0 kPa

- The lower region of the site still shows the presence of old slip deris. This must be removed prior to building work in this region. It is recommended that compacted hardfill be placed instead to act as a suitable base material for any slab. All foundations in this region must be anchored into the intact rock mass.

- The appropriate foundation for the development of this site should be comprised of reinforced concrete foundation beams placed longitudinally along the section (ie down the slopes), which are supported by reinforced concrete bored piles which are anchored into the intact rock mass. These piles should not be placed any further than 5.0m apart.

Stormwater

The careful management of stormwater runoff is vital to the continued stability of the proposed building site.
All stormwater from the following sources should be piped directly to the nearest naturally occurring flow path as indicated on the site plan:

- Water tank overflows
- Gutter and spouting overflows
- Paved areas
- Driveway drains
- Subsurface drains behind retaining walls
- Surface water interceptor drains in the top region of the section.

It is also imperative that a system of silt fences be erected to circumvent any areas left exposed due to earthworks during the construction process. This will prevent the migration of silt into the drainage flow paths and eventually to the shoreline.

During construction any stormwater concentrations should be contained in a 2 metre x 2 metre x 1.0 metre deep detention pond prior to discharging through a doubled layered silt fence into any existing stormwater system.
A properly formed roadside drain will be required along the upslope side of Wallace Lane to channel stormwater away from this site.

Effluent Disposal

It is understood that a town council sewer reticulation system is available to connect to for any proposed development on this site and that the site is within the are of benefit.

Recommendations

I recommend that:

- All stormwater runoff from the upper portion of this site be collected and piped directly to the stormwater reticulation on School Road. Alternatively, a suitable roadside drain be provided along Wallace Lane.

- Maximum ground cover be provided by vegetation or maximising the roof coverage over the site.

- All stormwater from the roof area be collected and disposed off in a sustainable manner – i.e either through attenuation tanks or directly to the shoreline via existing stormwater reticulation system on School Road.

- The removal of existing upper clay layer be maximised to reduce the volume of material prone to slippage.

- All cut faces and slip scarps be carefully retained during the construction phase.

- A system of contiguous concrete piles be employeed to reduce the risk of damage to neighbouring buildings.

- All foundations and retaining walls on this site be designed by a suitably qualified and Chartered Professional Engineer.

- The soil strength parameters as described in the report be used for the design of all foundations and retaining walls.

- All slip debris be removed from the lower portion of this site and replaced with suitably compacted hardfill.

- Reinforced concrete foundation beams should be placed longitudinally down the slope and supported by reinforced concrete piles which are embedded into the intact rock mass. These piles should be located no more than 5.0metres apart.

- Stormwater be carefully managed as discussed in the stormwater section of this report.

- Adequate temporary drainage and silt control measures be provided prior to undertaking any excavation.

- All excavation and construction work for the foundations and retaining walls be carefully inspected and monitored by a Chartered Professional Engineer.

Conclusions

It is possible to develop this site and build a stepped multi-storey type structure on this lot provided the abovementioned recommendations are followed.

Pradeep Kumar.

Dear Daiman

Re: 8 School Road – Revised Upgrade of Wallace Lane Driveway

As requested I have assessed the potential to achieve a 5.0 metre wide driveway on Wallace Lane to service the proposed residential development on Lot 3.The attached layout drawing indicates the general areas of widening, with relevant features noted.

Of particular note is the existing width constraint between a large timber retaining wall along the western driveway boundary and a power pole located approximately 10 metres from the adjacent wide road reserve. The existing features limit the available clearance to approximately 4.4 metres. Adjustment to the existing retaining wall or relocation of the power pole is not considered practical. The driveway can be widened to 5.0 metres to the south of the power pole, with the widening continued at least to the vehicle access to the proposed development.

The proposed driveway widening shown in the attached drawing (07125-02) is considered to be an improvement over the previous upgrade option (07125-01) presented to the Far North District Council. As such the related conclusion stated in the traffic impact assessment report, dated August 2007, is still considered appropriate. The related conclusion was: *The proposal includes a series of upgrade measures for the existing vehicle access. While the proposed access does not meet Council standards based on the current zoning or number of separate dwellings, the safety and operation of the access are considered acceptable.*

I trust this email provides sufficient information at this time. Please contact me should you wish to discuss further.

Yours sincerely,
TRAFFIC PLANNING CONSULTANTS LTD

David Philip

Memorandum

TO	:	*Melissa McGrath* *Far North District Council*
ADDRESS	:	*Private Bag 752,* *Kaikohe*
PROJECT	:	***RC 2080121*** ***Paihia Limited***
DATE	:	*13 September 2007*

Melissa – we need a Sec 92 notice I think:

(a) Please provide a plan showing details of the access to the site and demonstrating compliance with the requirements of the Far North District Council District Plan for width and gradients

(b) The geomechanics report indicates factors of safety for soil stability close to 1 for the soils in certain conditions. Please update this report to include comment on whether there will be any effect on adjoining properties, and whether there are any undeveloped areas of the subject property that may have an unacceptably low factor of safety.

Wayne R. Miller
BE (Civil), ME, MIPENZ, MIntPE
Chartered Professional Engineer

Melissa,

I am still not terribly happy with the submitted design. The Traffic Planning Consultants Limited report indicates a width of about 6 metres for a stated length of 7 metres from the road reserve; while I have not had the benefit of discussion with Marius Gabriels, this is inadequate in my view given the impact of possible queuing in the driveway.

There appears at least to be potential for further widening at the entrance and throughout the proposed accessway, and I think we should request some additional thought from them on this matter.

I will discuss with Marius when next I am in Kaikohe and further advise.

Dear Sir/ Madam

RESOURCE CONSENT APPLICATION – Request for Further Information

A preliminary assessment of your application for a resource consent to undertake a landuse proposal has been made.

Under Section 92(1) of the Resource Management Act 1991, the Council requires further information to be able to consider your proposal. This additional information will help us to better understand the proposed activity, its effects on the environment and the means by which any adverse effects on the environment may be avoided, remedied, or mitigated.

Please note that Council's Consultant Engineer Wayne Miller has completed a site inspection and assessment of your application, the following information request is a result of this assessment. The additional information required by the Council is listed below, with further reasons as to why we need this information to be provided.

1. Please provide a plan showing the details of site access and demonstrating compliance with the requirements of the Far North District Council District Plan for width and gradients.

2. The geomechanics report indicates factors of safety for soil stability close to 1 for the soils in certain conditions. Please update this report to include comment on whether there will be any effect on adjoining properties, and whether there are any undeveloped areas of the subject property that may have an unacceptably low factor of safety.

In accordance with the Act, your application will be suspended until we receive this information. Once we have received the information to our satisfaction, a decision will be made regarding the further processing of the application and whether notification may be required.

Under Section 92A(1) of the Act you are required to comply with this request before 10 October 2007, by either:

(a) providing the requested information, or;

(b) informing the Council in writing that you accept that the information can be provided within a reasonable time period, to be set by agreement and advised by the Council, or;

(c) informing the Council in writing of your refusal to provide the information, or;

(d) making a formal objection to this request under Section 357A(1)(b) of the Act, stating your reasons why you consider that this information should not be required by the Council.

Please use the attached form when sending in your response to the Council.

Note that under Section 92A(3) of the Act, the Council may decline your application if:

(1) You do not respond to this request, or;

(2) The information is not provided by the agreed date, set as specified under (b) above, or;

(3) You refuse to provide the information, as per (c) above, and;

(4) The Council considers and concludes that it has insufficient information to enable it to determine the application.

Please feel free to contact the undersigned if you have any questions or concerns.

Yours faithfully

Melissa McGrath

Attn: Daiman Otto

Dear Daiman

Re: 8 School Road – Proposed Upgrade to Wallace Lane Access

Further to recent discussions and correspondence, including receipt of additional survey information, I have assessed the potential widening of the existing vehicle access point where Wallace Lane joins School Road.

As stated in previous advice, it is considered necessary to upgrade the existing vehicle crossing layout within the road reserve to provide an appropriate area where two opposing vehicles can pass within Wallace Lane, adjacent to the School Road carriageway. The attached layout drawing (Ref. 07125-03) indicates key features pertaining to the existing access layout, together with possible carriageway widening. The attached drawing replicates the indicative carriageway widening within the private access way, as detailed in Drawing 07125-02 provided as an attachment to our letter to you dated 23 August 2007.

With regard to the proposed widening of Wallace Lane in the vicinity of School Road, the intention is to provide a passing bay which can accommodate an ingress vehicle passing another vehicle waiting to join School Road. The extent of widening shown on Drawing 07125-03 provides a varying width of access way, with a minimum of 5.5 metre width over the initial 7.0 metres adjacent to School Road. The proposed widening is considered sufficient to achieve acceptable two-way vehicle movement at the junction of Wallace Lane with School Road.

The widening of the Wallace Lane access point will take place fully within the road reserve on the uphill or western side of the lane. The existing road reserve, between the School Road carriageway and adjacent property boundary is in excess of 16 metres. The forming of the widened access point will necessitate the removal of a section of rock garden and landscaping used to define individual driveways to No. 10 and No. 12 School Road. The proposed access widening will involve an element of re-grading on the two adjoining driveways to achieve acceptable tie-in.

PO Box 60-255, Titirangi, Auckland
Level 1, 400 Titirangi Road
cnr Rangiwai Road, Titirangi Village

Tel: (09) 817 2500 Fax: (09) 817 2504
E-mail: tpc@trafficplanning.co.nz

The grades on the existing access way will be largely retained with proposed widening works tying into existing features. The existing access gradient, based on information provided in the topographical survey varies between 1 in 4.4 to 1 in 7.2 over the affected section. The access grades are in general compliance with Appendix 7B of the District Plan. While the site is zoned for commercial use with a stated maximum gradient of 1 in 5, all activities which gain vehicle access from Wallace Lane are residential. The maximum gradient for residential zones is 1 in 4 where the carriageway is sealed.

Rule 14.1.6.1.2(c) of the District Plan states that a platform no steeper than 1 in 20 should be provided adjacent to the road boundary for a length of six metres for commercial zoned sites and four metres for other zones. It is not feasible to amend the existing access grades to achieve a near-level platform at the site boundary or where the access way adjoins School Road. The adverse effects of this outcome will be mitigated by the lack of footpath on the western side of School Road. Further mitigation may be possible through the resealing of the access area and reduction in the amount of loose metal currently observed along the western side of School Road.

As mentioned previously, all widening works around the junction of Wallace Lane and School Road will be within road reserve. The design and construction of any proposed widening works should be agreed in consultation with the Far North District Council.

I trust the above and attached drawing provide sufficient information at this time. Please contact me should you have any queries or wish to discuss further.

Yours faithfully,
TRAFFIC PLANNING CONSULTANTS LTD

David Philip

RE: Resource Consent Application – Request for further information.
(refer to letter dated 19 September 2007)

This report must be read in conjunction with my report dated "Site Stability and Suitability Report for Lot 3 DP44530 at Wallace Lane, Paihia for Ormiston Project Management Ltd" dated June 2007.

The predominant area of this site will be excavated out and the clay above the rock will be removed – hence the factors of safety will be vastly improved for all the slip circles analysed. The areas close to the neighbouring boundaries will be retained using a contiguous concrete pile retaining wall with a capping beam – as described in my report. This will also improve the factors of safety against slippage along the boundaries. The old slip mass on the lower portion of this site will be removed and a new retaining wall will be built along the eastern end of the new driveway. This would stabilise this area and the factors of safety here would be significantly improved.

The proposed development will enhance the stability of this Lot and surrounding sections by providing adequate retaining wall structures and proper control of stormwater runoff.

Far North District Council

MEMO

To:	Marius Gabriels, Development Engineer, Roading
From:	Melissa McGrath, Resource Planner
Department	Regulatory Services
Date	31 October 2007
Subject	**Paihia Limited** **RC-2080121-RMALUC** **Land Use**

Further to the receipt of the abovementioned resource consent application, the applicant has provided additional information with regard to the access width, gradient and proposed work within road reserve.

The proposal is considered to be a restricted discretionary activity as a result of the proposed access. Due to the nature of the application, and intense public interest, Council must carefully determine whether or not the effects from the proposal are more than minor (therefore warranting public notification). Therefore it is critical that assessment of the access is accurate.

Please provide confirmation of the following aspects:

1. One major concern is that the entrance to Wallace Lane is located within 30m of the School Road and State Highway intersection; please provide confirmation of the setback.
2. With regard to the information submitted, please confirm that the proposed Wallace Lane and School Road intersection is safe and to Council's Engineering Standards.
3. Please confirm that you are satisfied with the gradients of the proposed access given the level of traffic intensity.
4. Please confirm that you are satisfied with the potential impact of the proposed entrance on Numbers 10 and 12 School Road.

If you have any queries please do not hesitate to contact me, on ext 6724.

Kind Regards

Melissa McGrath
Resource Planner

File Message : **Date : 21 November 2007**

To : Melissa McGrath , Far North District Council.

Re : Apartment Project – Wallace Lane , Paihia : RC 2080121.

Dear Melissa ,

1. We have been instructed to assist the applicant with the processing of this resource consent application which was lodged by Ormiston Project Management Limited. To that end our client has provided us with copies of the relevant application and communications which have taken place with Council.

2. Our assessment of the proposal is that it is deemed to fall as a Restricted Discretionary Activity within the Commercial Zone of the Operative District Plan. The specific matter over which Councils discretion is limited relates to the width of the access drive which is reflected within those matters described within Rule 14.1.7.2.

3. The traffic information prepared by TPC dated August 2007 and lodged with Council adequately details the manner in which the application attains those specified matters. In addition the two matters specified in your Section 92 request dated 19 September 2007 were covered in the replies of TPC and PK Engineering both dated 30 October 2007.

4. It is understood that the application is being referred to a Council Committee to determine whether or not the application should be processed under limited or full public notification. It is also my understanding which was subject to you receiving the Section 92 information that such consideration will be undertaken on the 26 November 2007 such date being agreed between yourself and Damian Otto. The applicant has meet those undertakings.

5. In my recent communications with Daiman ,post 30 October 2007, he has advised that Council now requires information on the effect of traffic movements at the School Road / Marsden Road intersection. The original TPC report dealt with those issues and Mr David Phillip , the traffic engineer , in subsequent discussions with Mr Miller was of the opinion that all issues had been dealt with in the 30 October 2007 response.

6. It would certainly assist the applicant if Council would specifically advise what the particular concerns are as from what I have reviewed the goal posts seem to move .

7. In my opinion Council does not have adequate information to warrant the application being processed beyond that of limited notification. Indeed I am fully aware of the articles in the newspaper however these are dealing with matters which cannot be taken into account by Council when assessing who is affected. Section 93 is very clear that only matters over which Council has limited is discretion can be taken into account i.e. Rule 14.1.7.2.

8. We therefore await confirmation that this matter will be considered at the meeting of 26 November 2007 and look forward to receiving a copy of the planning report.

9. It may well be beneficial that we meet with you beforehand to review the above. In the meantime we would ask for copies of all communications to / from any third paries in relation to this application.

I look forward to hearing from you .

Regards ,

Jeff Kemp.

Dear Sir/ Madam

RESOURCE CONSENT APPLICATION – Request for Further Information

A preliminary assessment of your application for resource consent to undertake a landuse proposal has been made. Further review of the traffic reports and assessment of the additional information provided has been completed by Council's Consultant Engineer Wayne Miller and Council's Road and Drainage Development Engineer, Marius Gabriels.

Under Section 92(1) of the Resource Management Act 1991, the Council requires further information to be able to consider your proposal. This additional information will help us to better understand the proposed activity, its effects on the environment and the means by which any adverse effects on the environment may be avoided, remedied, or mitigated.

The additional information required by the Council is listed below, with further reasons as to why we need this information to be provided.

1. Please expand the scope of the Traffic Report submitted within the application, prepared by Traffic Planning Consultants Ltd to address the following matters:

   - The potential impact of the proposed right of way (ROW) construction and subsequent increased use will have on the intersection of School Road and Marsden Road (State Highway 11).

   - How safe sight distances and manoeuvring to and from School road can be achieved give the proximity of the proposed access to the intersection of School Road and Marsden Road (24m) compared to the recommended sight distance of 65 metres in a 50kph speed zone area.

   - The proposed grade of the ROW is considered not to be satisfactory for safe access if no entrance platform for users is provided, please provided further clarification as to how safety of ROW users will be achieved.

In accordance with the Act, your application will be suspended until we receive this information. Once we have received the information to our satisfaction, a decision will be made regarding the further processing of the application and whether notification may be required.

Under Section 92 A (1) of the Act you are required to comply with this request before **20 December 2007**, by either:

(a) providing the requested information, or;

(b) informing the Council in writing that you accept that the information can be provided within a reasonable time period, to be set by agreement and advised by the Council, or;

(c) informing the Council in writing of your refusal to provide the information, or;

(d) making a formal objection to this request under Section 357 A (1)(b) of the Act, stating your reasons why you consider that this information should not be required by the Council.

Please use the attached form when sending in your response to the Council.

Note that under Section 92 A (3) of the Act, the Council may decline your application if:

(1) You do not respond to this request, or;

(2) The information is not provided by the agreed date, set as specified under (b) above, or;

(3) You refuse to provide the information, as per (c) above, and;

(4) The Council considers and concludes that it has insufficient information to enable it to determine the application.

Please feel free to contact the undersigned if you have any questions or concerns.

Yours faithfully

Dear Daiman

Re: 8 School Road, Lot 3 Wallace Lane – Section 92 Response

Further to recent discussions and correspondence, we have considered the three listed points outlining additional information requested by the Far North District Council. As discussed, the three items raised were identified in previous correspondence, including the Traffic Impact Assessment (TIA) report dated August 2007.

The following comments relate to the bulleted items in the Council letter dated 28 November 2007.

Impact on intersection of Marsden Road and School Road

The day-to day traffic generation of the proposal was previously discussed in Section 5.1 of the TIA report submitted with the resource consent application. For the purposes of assessment, the additional vehicle trips generated by the proposal were taken to be up to 50 movements per day and five movements during the peak hour of generation. Given the location of the proposed development and the likely non-continuous occupancy of all five units, the actual number of trips generated outside of the peak holiday season would be expected to be less than stated.

A peak hour generation of five vehicle trips would typically be split between arrival and departure movements. A worst case scenario may be four departure trips leaving the proposed development, joining School Road and turning right onto Marsden Road. While accurate information is not to hand for turning counts at the Marsden Road/School Road intersection, anecdotal evidence from local contacts, together with our own observations, would suggest that the traffic generated by the proposal will have no noticeable effect on capacity and operational.

With regard to potential adverse effects at the Marsden Road/School road intersection during construction, Section 5.3 of the TIA report provides some initial thoughts. As noted, the construction works should be subject to a traffic management plan (TMP)

PO Box 60-255, Titirangi, Auckland
Level 1, 400 Titirangi Road
cnr Rangiwai Road, Titirangi Village

Tel: (09) 817 2500 Fax: (09) 817 2504
E-mail: tpc@trafficplanning.co.nz

to effectively control potential adverse effects to the satisfaction of Council. It is acknowledged that construction of the proposed apartments will be challenging given access constraints and topographical considerations. It is considered reasonable to define appropriate conditions for inclusion in a Council decision on the consent application. Appropriate conditions and requirements to be included in a construction TMP may include specified construction times, the avoidance of truck movements as stated times, and the requirement for an off-site 'waiting area' for trucks to prevent waiting on the School Road carriageway.

As a further general observation, it is our understanding that the intersection of Marsden Road and School Road typically operates without any notable safety or capacity concerns. During busier periods, the operation of the intersection is affected more by the function of Marsden Road; namely, pedestrian crossing and side street/parking accesses to north, and kerbside parking along eastern side of Marsden Road, rather than the number of traffic movements to and from School Road.

Sight distances at Wallace Lane

The sight distance requirement suggested in the Council letter adopts standard values for a 50 km/h posted speed limit. The suggested value of 65 metres relates to stopping sight distance for a car travelling at 60 km/h in a semi-rural environment (2 second reaction time). We believe more appropriate assessment criteria of stopping sight distance would take account of the urban environment and the negotiation speed of vehicle turning into School Road from Marsden Road. As an example, the stopping sight distance for a car travelling at 40 km/h in an urban environment is 30 metres[1]. The equivalent sight distance required for a car travelling at 35 km/h is 23 metres.

The Council letter notes that the separation between Marsden Road and the existing Wallace Lane access point is 24 metres. The available sight distance between a driver waiting to exit Wallace Lane and vehicles turning into School Road will be in excess of this distance. We believe the available sight distance is acceptable for the operating condition of the access way and frontage road.

We would also point out that the subject access way is currently in operation and to our knowledge does not generate crashes between turning vehicles and traffic approaching from Marsden Road. We further note that the property immediately east of Wallace Lane has an access way closer to Marsden Road. This access serves at least 18 parking spaces via combination of at grade and basement parking. The recorded crash history does not highlight any crashes associated with either of the two existing access points.

Provision of entrance platform

As previously noted in the TIA report and a subsequent response dated 30 October 2007 to an earlier Section 92 request, a near-level platform for vehicles joining School

[1] Table 5.1 of Austroads Part 5 – Intersections at Grade

Road cannot be achieved due to existing grade constraints within the road reserve. The District Plan requirements relate to an entry platform within the subject property, prior to joining the road reserve which may be achieved if deemed beneficial. However, given the true purpose of providing a near-level platform, and the location of the road reserve boundary, there seems to be no benefit in amending existing grades within the property.

Previous advice has also been provided in regard to the safe operation of the access point, where it joins the School Road carriageway. The key considerations for the safety operation of steep driveways are considered to be appropriate surfacing material, impact on pedestrians, and visibility along the driveway.

It is noted the existing vehicle crossing is in a generally poor condition with minor potholes and loose material. An upgraded access would be sealed in a satisfactory manner and if desirable include further sealing of the metalled access way to No. 12 School Road which appears to be a source of loose material. The finished surface would provide good skid resistance and enhance the existing access operation.

There is no pedestrian footpath on the southern side of School Road and hence the grade of the approach will not influence pedestrian safety. The existing driveway is relatively straight and affords acceptable sight lines to the access point with School Road from the property boundary.

As stated previously, we believe the adverse affects associated with the grade of the existing access way (Wallace Lane) can be adequately mitigated through localise widening and application of suitable surfacing material.

We trust the above provides sufficient information at this time. Please contact me should you have any queries or wish to discuss further.

Yours faithfully,

Dear Madam

PROPOSED SUBDIVISION - PAIHIA
STATE HIGHWAY 11, 8 SCHOOL ROAD, PAIHIA 0200

Thank you for your letter dated 28th Novemebr 2007, relating to a subdivision proposal located on State Highway 11, in Paihia.

This letter is to inform you that Transit has received the proposal and is in the process of assessment. The assessment will involve a site visit by our network consultants to collect relevant access data and this will be assessed against Transit's current access management policies and practices, this will therefore mean we will **not** be able to respond within 10 working days.

Please be advised that we will respond to you when the appropriate reporting has been completed.

If you have any enquiries, please do not hesitate to contact me on phone (09) 368 2000 or email planning@transit.govt.nz

Yours faithfully

MEMO

To:	Melissa McGrath, Resource Planner, Regulatory Services
From:	Maruis Gabriels, Road and Drainage Development Engineer
Department	Roading and Drainage Department
Date	28 November 2007
Subject	**Paihia Limited** **RC-2080121-RMALUC** **Land Use**

There are several issues that concern me with this proposal.

1. The distance from the proposed access to the intersection with Marsden road measures at 24 metres. Council's Engineering Standards and Guidelines suggest adequate sight distance from 50kph should be 65metres (TNZ values). It is acknowledged that the speed value of vehicles traversing the corner from Marsden Road will be less than the 50kph speed value however enough reaction time to stop is still required in an emergency.

   The intersection with Marsden road is at an obtuse angle of 120 degrees suggesting the speed value of a left turning vehicle into School road is able to travel this curve at a faster speed than that of a right angle intersection. This would therefore require a reaction time to stop greater than the 24 metre available.

2. Traffic Planning Consultants Ltd (TPC) statement disregarding the access platform for safe access onto School road is considered to be detrimental to ROW users and does not comply with our Engineering Standards and Guidelines.

3. As already mentioned the grade as proposed at School road is not satisfactory for safe access if no platform for users is provided.

4. The potential impact of this development will not greatly impact on other users, with 5 existing users and five new users the estimate traffic movements are 100 per day, the widening of the ROW and the proposed passing bay adequately compensates for the additional use.

File Message : **Date : 21 November 2007**

To : Melissa McGrath , Far North District Council.

Re : Apartment Project – Wallace Lane , Paihia : RC 2080121.

Dear Melissa ,

1. We have been instructed to assist the applicant with the processing of this resource consent application which was lodged by Ormiston Project Management Limited. To that end our client has provided us with copies of the relevant application and communications which have taken place with Council.

2. Our assessment of the proposal is that it is deemed to fall as a Restricted Discretionary Activity within the Commercial Zone of the Operative District Plan. The specific matter over which Councils discretion is limited relates to the width of the access drive which is reflected within those matters described within Rule 14.1.7.2.

3. The traffic information prepared by TPC dated August 2007 and lodged with Council adequately details the manner in which the application attains those specified matters. In addition the two matters specified in your Section 92 request dated 19 September 2007 were covered in the replies of TPC and PK Engineering both dated 30 October 2007.

4. It is understood that the application is being referred to a Council Committee to determine whether or not the application should be processed under limited or full public notification. It is also my understanding which was subject to you receiving the Section 92 information that such consideration will be undertaken on the 26 November 2007 such date being agreed between yourself and Damian Otto. The applicant has meet those undertakings.

5. In my recent communications with Daiman ,post 30 October 2007, he has advised that Council now requires information on the effect of traffic movements at the School Road / Marsden Road intersection. The original TPC report dealt with those issues and Mr David Phillip , the traffic engineer , in subsequent discussions with Mr Miller was of the opinion that all issues had been dealt with in the 30 October 2007 response.

6. It would certainly assist the applicant if Council would specifically advise what the particular concerns are as from what I have reviewed the goal posts seem to move .

7. In my opinion Council does not have adequate information to warrant the application being processed beyond that of limited notification. Indeed I am fully aware of the articles in the newspaper however these are dealing with matters which cannot be taken into account by Council when assessing who is affected. Section 93 is very clear that only matters over which Council has limited is discretion can be taken into account i.e. Rule 14.1.7.2.

8. We therefore await confirmation that this matter will be considered at the meeting of 26 November 2007 and look forward to receiving a copy of the planning report.

9. It may well be beneficial that we meet with you beforehand to review the above. In the meantime we would ask for copies of all communications to / from any third paries in relation to this application.

I look forward to hearing from you .

Regards ,

Jeff Kemp.

Dear Sir/ Madam

RESOURCE CONSENT APPLICATION – Request for Further Information

A preliminary assessment of your application for resource consent to undertake a landuse proposal has been made. Further review of the traffic reports and assessment of the additional information provided has been completed by Council's Consultant Engineer Wayne Miller and Council's Road and Drainage Development Engineer, Marius Gabriels.

Under Section 92(1) of the Resource Management Act 1991, the Council requires further information to be able to consider your proposal. This additional information will help us to better understand the proposed activity, its effects on the environment and the means by which any adverse effects on the environment may be avoided, remedied, or mitigated.

The additional information required by the Council is listed below, with further reasons as to why we need this information to be provided.

1. Please expand the scope of the Traffic Report submitted within the application, prepared by Traffic Planning Consultants Ltd to address the following matters:

   - The potential impact of the proposed right of way (ROW) construction and subsequent increased use will have on the intersection of School Road and Marsden Road (State Highway 11).

   - How safe sight distances and manoeuvring to and from School road can be achieved give the proximity of the proposed access to the intersection of School Road and Marsden Road (24m) compared to the recommended sight distance of 65 metres in a 50kph speed zone area.

   - The proposed grade of the ROW is considered not to be satisfactory for safe access if no entrance platform for users is provided, please provided further clarification as to how safety of ROW users will be achieved.

In accordance with the Act, your application will be suspended until we receive this information. Once we have received the information to our satisfaction, a decision will be made regarding the further processing of the application and whether notification may be required.

Under Section 92 A (1) of the Act you are required to comply with this request before **20 December 2007**, by either:

(a) providing the requested information, or;

(b) informing the Council in writing that you accept that the information can be provided within a reasonable time period, to be set by agreement and advised by the Council, or;

(c) informing the Council in writing of your refusal to provide the information, or;

(d) making a formal objection to this request under Section 357 A (1)(b) of the Act, stating your reasons why you consider that this information should not be required by the Council.

Please use the attached form when sending in your response to the Council.

Note that under Section 92 A (3) of the Act, the Council may decline your application if:

(1) You do not respond to this request, or;

(2) The information is not provided by the agreed date, set as specified under (b) above, or;

(3) You refuse to provide the information, as per (c) above, and;

(4) The Council considers and concludes that it has insufficient information to enable it to determine the application.

Please feel free to contact the undersigned if you have any questions or concerns.

Yours faithfully

Dear Madam

RE: PROPOSED LANDUSE – PAIHIA LTD
SH, 11 PAIHIA

Thank you for your letter relating to the above proposal dated 28 November 2007.To reiterate Transit's understanding the proposal is for the construction of an apartment block comprising five separate residential units on the parent lot, legally described as, Lot 3 DP 44530. The property is accessed via Wallace Lane from School Rd.

We have carefully considered the proposal and prepared to remain **unopposed** to the proposal pursuant to section 94 of the Resource Management Act 1991.

The following summarises the reasons and matters that Transit had to consider when assessing this proposal:

- The proposed site is accessed via a local side road, which is consistent with Transits access management policy.
- The site is located within an urban environment and is located within a 50km/h speed limit

This response is Transit New Zealand's current view of the situation. Please note that if this proposal is put on hold for any length of time and resubmitted at a later date Transit may need to review its comments in the light of any traffic, safety or policy change.

Please forward us a copy of the Council's decision on this resource consent application when available.

Dept	Doc Ref
Reg	M2-647

1/ Parking and access

Because the proposed construction is within the commercial zone, it could easily be turned into a motel, rental apartments or upmarket backpacker accommodation increasing traffic flow to and from the property. What provision is there for extra parking and should the carriageway not be 6metres wide?

2/ Stormwater

In February, and again in March 2007, storm water from Wallace Lane contributed to serious flooding of two low lying properties (Pioneer Apartments and Apartment F, Marsden Close) on Marden Rd. The existing 3 cesspits along Marsden Rd, between Kings Rd and School Rd, have proven to be inadequate in heavy rain. Will this be improved?

3/ Ground Stability

The proposed site has suffered subsidence in the past. What assurances do we have that surrounding properties will not be adversely affected by the construction? Will the 'Lane' stand up to the heavy machinery?

I am not against progress, but along with other affected residents, I have serious concerns about the project and would like to see an independent engineers report before work begins.

RESOURCE MANAGEMENT ACT 1991
SUBMISSION PURSUANT TO SECTION 96 OF THE RESOURCE MANAGEMENT ACT 1991

To: Far North District Council
Private Bag 752
KAIKOHE 0400
Attention: Melissa McGrath, Resource Planner

Name of Submitter: Violet Johnson

Submission On: Resource consent application by Paihia Limited: RC 2080121 RMALUC. Proposed application for land use to construct a new residential apartment building, comprising of 5 apartments, associated parking and access at 8 School Road, Paihia 0200.

Address: 8 School Road
Paihia

SUBMISSION IN OPPOSITION

1. The specific parts of the application that my submission relates to are:

Access and Carparking – School Road and Wallace Lane.

2. My submission is that:

2.1 I am a resident of Marsden Close which is a Body Corporate managed apartment complex. My apartment "A" is situated directly below the applicant's site.

2.2 The applicant proposes widening Wallace Lane and providing for 11 carpark spaces within the site. This will result in a significant increase of traffic flow along and to Wallace Lane and School Road.

2.3 A number of construction vehicles will access the site over a 12 month period significantly increasing traffic flow.

2.4 Wallace Lane does not comply with the District Plan rules for road width for two way access.

In order for the lane to be sufficiently wide enough to comply with the rules significant construction works would need to be completed on land situated below Wallace Lane. These works will create adverse construction, noise and vibration effects on any and all properties adjacent to or adjoining Wallace Lane access. The effects will be more than minor.

2.5 The mitigation measures proposed by the applicant are wholly inadequate to avoid remedy or mitigate the adverse effects of these works.

3. Without derogating from the generality of the above:

(a) **Vehicle access**

The access carriageway will serve more than 5 residential units and fails to comply with the minimum width of 6m. In addition, the length and width of the access prohibits the provision of sufficient passing bays. Thus the access is inadequate. This gives rise to adverse effects related to traffic safety, ingress and egress difficulties and adverse amenity impacts that are more than minor. The residents will not be able to enforce and control the number of visitors and resulting congestion as a result of the development.

The applicant has not made adequate provision to mitigate the effects of stormwater runoff and drainage patterns of adjoining properties as a result of the development.

(b) **Traffic movement and safety**

The applicant's proposal will not be safe and provide efficient access for pedestrians, bicycles and vehicles without disrupting the amenities of the surrounding environment. The adverse effects of transport on the environment will not be minimised. The resulting development will increase traffic movement and formation which will lead to traffic congestion, inadequate sight distances available at the access location and an increase in safety issues in an already congested area.

The vehicle access is within 30m of School Road and the intersection with State Highway 11. The substantial increase of 50 traffic movements (as stated in the report provided by Traffic Planning Consultants ("TCP")) will result in an exacerbation of traffic safety. Transit New Zealand have not given written confirmation for the proposal. The development will result in adverse effects to the intersection.

(c) **Vehicle queuing spaces**

The applicant is required pursuant to rules 15.1.6.1.2(h) and (m) to provide a double-width entrance together with passing bays and vehicle queuing spaces at the entrance to the legal road. The width of the Wallace Lane access will prohibit the applicant providing such queuing space. The applicant is unable to comply with Council's engineering standards and guidelines and cannot sufficiently mitigate the effects of the impact of roading and access to the applicant's property or to the adjoining landowners who will be directly effected by the development.

(d) **Residential development in commercial zone**

The development is to be undertaken in a commercial zone. However, the applicant refers to the development as a residential activity. The zoning for the area is not residential and nor should it be considered so by Council. The residential development will result in an increase of residents during particular times of the year and therefore the number

of residents at any one time should be limited. The number of car movements along the accessway will also need to be limited in order to minimise any effects. An increase in 5 residential units within a commercially zoned area will substantially increase the traffic flows for all residents.

(e) **Adverse effects**

In this case, the applicant proposes to significantly widen the access lane in order to accommodate 5 residential units with 11 allotted car spaces. During the construction phase of the development the engineers report for the applicant provided by TCP estimates that there may be up to 10 traffic movements per day over a course of 12 months. The current accessway cannot adequately accommodate such activity. The applicant has not provided any plans or drawings with respect to the structural aspects of the road widening such as retaining walls, engineers reports, subsidence, stability or site suitability.

The proposal will result in adverse effects more than those permitted in the District Plan. The traffic report submitted by the applicant concludes that the proposed activity will fail to meet the provision of the District Plan. The adverse effects arising from the proposal will be more than minor. The application fails to meet both road width and gradient for the proposed access and activity.

3. I seek the following decision from the Far North District Council:

3.1 That the application be refused consent

Or

3.2 Such other relief that will meet the concerns of the submitter.

AND

3.3 Such consequential relief necessary to give effect to the submission.

4. I do wish to be heard in support of my submission.

5. If others make a similar submission I would be prepared to consider presenting a joint case with them at any hearing.

Signature  Date 27 February 2008.

Submission on RC2080121 by Paihia Ltd to construct a 5 unit residential apartment building at 8 School Rd, Paihia:

Submitter: James & Leonie Brock; 4 School Road, Paihia.

The application is opposed on the following grounds:

1. The access proposed does not meet an appropriate standard for the development to proceed. Nor is adequate access able to be formed for this level of development intensity given the available legal width of the easement and physical constraints.

2. It will have more than minor effects on the safety and efficiency of the roading network.

3. It will have more than minor effects on the existing amenity of the area.

4. It is contrary to the objectives and policies of the District Plan.

5. The land is unstable and there is no certainty that a project of this scale can proceed without detriment to adjoining/adjacent property.

6. Approving the application could also be seen to legitimise use of the site in terms of the permitted Commercial Zone Traffic Intensity of 200 daily movements and thereby further compromise amenity and safety.

7. We also raise the issue of whether the applicant requires resource consent from the Northland Regional Council for the excavation given the erosion prone nature of the site and surrounds.

This is a submission on an application from Paihia Limited, RC-2080121-RMALUC, an application for a Land Use to Application to construct a new residential apartment building, comprising of five apartments, associated carparking and access at 8 School Road, Paihia 0200.

The specific parts of the application that my submission relates to are [*give details*]:

1 Driveway access from Wallace Lane to No 10 and No 12. Note Aerial Photo
2 Boundaries Lot 10 // Wallace Lane Note Plan
3 It would seem to be sensible to bury the power wires at the time of development.

My submission is [*include whether you support or oppose the specific parts of the application or wish to have them amended; and the reasons for your view*]:

I support the project, subject to my concerns re the access being satisfied.

I seek the following decision from the Council [*give precise details, including the general nature of any conditions sought*]:

1 To ensure Developers retain the shape and gradient of the drive (Marked in Pink on the aerial Photo) to give No 10 and No 12 + Wallace Lane Residents access as good or better than now
2 To ensure developer retains bank if they remove rock wall (Note Plan attached)
3 It would seem to be sensible to bury the power wires at the time of development.

I wish (~~or do not wish~~) to be heard in support of my submission

* If others make a similar submission, I will consider presenting a joint case with them at a hearing [* Delete this line if you would not consider presenting a joint case]

Wallace Lane. Development Site.

Relaid Concrete drive.

When I purchased No 10 in 1993 it was very very difficult to get from Wallace Lane up our drive.
I ripped up the old drive, reshaped and relaid in concrete the total bottom area giving far better access to Wallace Lane residents and to No 10 and No 12.

[redacted] Rock wall and bank on developers land.

[redacted] Small area of my land used for Wallace Lane access.

If developer takes out rock wall and part of the bank they will need to retain the bank

Dear Renee

Re: RC-2080121-RMALUC – RESOURCE CONSENT APPLICATION

Hearing date has been scheduled for the 31st March 2008 at 9.30am to be held in the Kaikohe Council Chambers, Memorial Avenue, Kaikohe

Far North District Council now use independent commissioners and applicants are able to state their preferences for their preferred commissioners. Two commissioners are required and it would be appreciated if you could make your choice and advise me as soon as possible. I have enclosed our booklet to assist you with your choice,

If you have any further queries regarding this matter, please contact the undersigned.

Yours faithfully

Raewyn Smythe
HEARINGS ADMINISTRATOR

30 April 2008.

Dear Submitter ,

Re; Paihia Limited – Proposed Residential Development : Access Arrangements.

You will recall that at the end of the Hearing the applicant offered to reassess the manner in which vehicle access was to be established for their development .

Unfortunately inclement weather delayed the additional site survey and subsequent presentation of this additional information. We would apologize for that delay.

The further site survey has now identified the location of the two residential units within Marsden Close which adjoin the existing Right of Way. The survey has also identified the existing retaining wall and fixed ground levels adjoining the common boundary.

From this information two options have been prepared which were discussed at the Hearing.

The first is OPTION A which entails the development of the wooden retaining wall of approximately 70.0m in length and reflects the application as lodged with Council. [I have detailed this as OPTION A – Sheets 1 , 2 and 3] As depicted on the Cross Section A-A [Sheet 3] this wall will be set into the natural ground level and will also sit within the existing slip debris. The effect of this meaning that the wall will have a visual presence of up to 1.5m above the existing ground level for parts of its length.

The second is OPTION B which entails linking the new access drive into the existing retaining wall located within the Marsden Close property for a distance of about 21.0 metres. [I have detailed this as OPTION B – Sheets 1 , 2 and 3].This would reduce the length of the proposed wooden retaining wall over that distance with the balance being constructed as per OPTION A.

We anticipate that this information may create a few questions and to that end I would welcome your initial comments on what has been proposed.

Our client is keen to move the application forward and would like to receive your input by Friday 9 May 2008 in order that we can respond to Council.

In the meantime please do not hesitate to contact me for any additional information.

Thank you in anticipation.

Yours faithfully ,

Jeff Kemp.

Manukau 2141

Dear Sir / Madam

Re: RC-2080121-RMALUC – RESOURCE CONSENT APPLICATION

I am pleased to inform you that your application for resource consent has been approved. The decision is enclosed for your information. The application was considered and determined under authority delegated to the Manager, Environmental Services of the Far North District Council, pursuant to Section 34(4) of the Resource Management Act 1991.

It is very important that you understand and comply with any conditions of consent. If you have any questions or concerns about any aspect of your consent or its conditions, please contact the Planner who prepared the decision.

Your consent expires five years from the date that you receive this decision. Please note that under Section 125 of the Resource Management Act 1991, your consent will lapse unless you make significant progress towards giving effect to the consent within the five year period.

If you are dissatisfied with the decision or any part of it, you have the right (under Section 357 of the Act) to object to the decision. The objection must be in writing, stating reasons for the objection, and must be received by Council within 15 working days of your receipt of this decision.

Depending on the costs charged against your consent, you will find enclosed either an invoice or a credit note. Any additional costs shown on an invoice need to be paid as soon as possible. If you receive a credit note, you have the option of requesting a refund by cheque, or transferring the amount to any other Council account.

If you have any further queries regarding this matter, please contact the reporting Planner.

Yours faithfully

Customer Services Officer – Planning Consents
Development Consents Department

IN THE MATTER of the Resource Management Act 1991:

AND

IN THE MATTER of an application under the aforesaid Act, 1991 by Paihia Limited

APPLICATION NUMBER RC-2080121-RMALUC

Hearings application to construct and occupy a new residential apartment building, comprising of five residential units with onsite parking.

The property in respect of which the application is made, is situated at Wallace Lane, 8 School Road, Paihia. Area of Site: 1189m2. Zoning: Commercial

HEARING

Before Hearings Commissioners J Carr and L Robertson for the Far North District Council, on the 31st of March 2008 and the 20th of June 2008.

DECISION

That pursuant to sections 104,104C and 108 of the Resource Management Act 1991, the Council grants its consent to Paihia Limited to construct and occupy a new residential apartment building, comprising of five residential units with on site car parking and upgraded access at Wallace Lane, 8 School Road, Paihia; being more particularly described as Lot 3 DP 44530 contained in NA1544/80 (North Auckland Registry), subject to the following conditions:

(1) The development shall be carried out in accordance with the approved architectural plans prepared by Ormiston Project Management Limited, referenced "Paihia Projects Ltd, Wallace Lane, Paihia, Proposed Development" dated 26 March 2007, and access detail plan prepared by TPC, referenced "Lot 3, 8 School Rd, Paihia, Existing Access Details & Proposed Widening (5.0m), and further qualified by the approved engineering plans prepared by PK Engineering referenced "Proposed Project Lot 3, 8 School Road, Paihia, dated April 08, Project 07 – 142 (see condition 11 below) and attached to this consent with the Council's "Approved Plan" stamp affixed to it (dated 6 December 2006) and as required to be amended by the conditions of this consent.

(2) The proposed building and associated plant shall be constructed and operated in accordance with the recommendations and comments set out in the report prepared by Golder Associates and dated 29th June 2007.

(3) The proposed activity is to comply with the permitted noise levels as set out in the Partly Operative District Plan. Any issue of non-compliance with the prescribed levels will necessitate monitoring by Council, the costs of which may be required to be recovered from the applicant.

(4) Construction noise shall meet the limits recommended in, and shall be measured and assessed in accordance with, NZS 6803P:1984 'The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work'.

(5) Earthworks requiring heavy machinery and mechanical digging equipment, and the use of any power tools on site, shall be restricted to the hours of between 8.00 am to 6.00 pm Monday to Friday and 8.30 am to 1.00 pm Saturday. There shall be no movement of heavy vehicles to and from the site outside of these hours.

All other works shall be restricted to the hours of between 7.30 am to 6.00 pm Monday to Friday and 8.00 am to 1.00 pm Saturday.

No work shall be undertaken on Sundays and public holidays.

(6) Prior to commencing any physical site works a construction management plan shall be submitted to and approved by the Council. The plan shall contain information on, and site management procedures for, the following matters:

a. The timing of civil engineering, building construction and any demolition works, including hours of operation and key project and site management personnel and their contact details;

b. The transportation of demolition, construction and waste materials to and from the site, the loading and unloading of materials and the associated controls on vehicles through sign-posted site entrances and exits;

c. The excavation and filling works, including any retaining structures and any necessary de-watering requirements/methods, to be prepared by a Chartered Professional Engineer with suitable geotechnical qualifications and expertise;

d. Control of dust and on-site noise (including compliance with construction noise standards) and any appropriate avoidance or remedial measures;

e. Construction Traffic management on the Right of Way (Wallace Lane) to maintain single lane access for other access users and adjoining property owners.

f. Prevention of earth, mud, gravel or other material being deposited on adjoining roads by vehicles exiting the site, and proposing remedial measures should that occur;

g. Publicity measures, including signage, to inform adjacent landowners, occupiers, pedestrians and other users of School Road.

h. Safety fencing isolating the site from the Right of Way and pedestrian access to enable the safe passage of pedestrian traffic, including access to Lot 1 DP 140756

The Council may require all or parts of this report to be peer reviewed, with all costs associated with the review being met by the Consent Holder.

(7) All construction works on the site are to be undertaken in accordance with the approved Construction Management Plan.

(8) That prior to the commencement of construction on site the consent holder shall provide evidence to confirm that Top Energy have removed the power poles along Wallace Lane and re-installed the power underground including connections to each of the existing properties serviced.

(9) That prior to the commencement of construction on site the consent holder shall upgrade the existing entrance off School Road to provide a double width commercial entrance complying with the Council's Engineering Standard

FNDC/S/2. The upgraded entrance is to accommodate the continuing use by all of the adjacent lots which currently share the common entry point.

(10) That prior to the commencement of construction on site the consent holder shall upgrade the access along 'Wallace Lane' to provide a 5m minimum width concreted carriageway up to the southern boundary of Lot 3 DP 44530. The following requirements shall be met:

a. During construction these works will be supervised by the design engineer or a Certified Professional Engineer.

b. The construction shall be carried out in accordance with either option A or option B identified in the approved engineering plans prepared by PK Engineering referenced "Proposed Project Lot 3, 8 School Road, Paihia, dated April 08, Project 07 – 142, Sheet C3 (option A), Sheet C4 (option A), Sheet D8 (option A); Sheet C3 (option B), Sheet C4 (option B), Sheet D8 (option B), and attached to this consent with the Council's "Approved Plan" stamp affixed to it (dated 6 December 2006) and as required to be amended by the conditions of this consent.

[Note: The preferred upgrade option is option B, in principle and is subject to refinement and agreement to any easements necessary for the works being reached with the Body Corporate of Marsden Close, BC12274 Lot 1 DP 120926]

c. The shape and gradient of the existing driveway to Lot DP 44530 will be retained to ensure that the standard of access to numbers 10 and 12 School Road is not diminished.

d. The concrete surface of Wallace lane shall have a cross slope of 1:50 from the eastern side adjoining DP 120926 (Marsden Close) to the concreted dish drain on the western side.

e. A concrete kerb of a minimum height of 125 mm will be constructed along the eastern side of Wallace Lane adjoining DP 120926 (Marsden Close) to prevent surface water from overflowing onto DP 120926.

f. Services including power and phone lines and stormwater pipes shall be aligned and buried as close as practicable (taking into account any existing easements) to the middle of Wallace Lane. The power and phone lines shall be contained in separate ducting such that the materials for ducting and the size of ducts shall comply with the requirements of the network operators.

g. Prior to the completion of the concreting of the Wallace Lane carriageway the applicant shall submit for the consideration of Council the design and details of the stormwater pipe to be installed under the concreted carriageway. The design shall be completed by a C.P Engineer and shall include details of the overland flow path for the 1 in 100 year rainfall event.

h. Should the rock retaining wall on the boundary of Lot 2 DP 44530 be removed or damaged, the bank is to be suitably retained under the supervision of a Chartered Professional Geotechnical Engineer.

i. Should any damage occur to structural integrity of the carport on Lot 2 DP 44530, appropriate remedial action is to be undertaken immediately.

(11) That all earthworks and construction for the development are to be completed in accordance with the Site Stability and Suitability Report prepared by PK Engineering, Job No. 07-56 and dated June 2007.

(12) That all earthworks and construction for the development (including the Wallace Lane improvement works) are to be supervised by a suitably qualified geotechnical engineer and appropriate measures are to be undertaken e.g. Sheet

piling to stabilise the cut faces and prevent subsidence of adjacent properties. This will require an engineer's producer statement upon completion of the works.

(13) Any fill required to be utilised for the proposed earthworks shall comply with Rule 12.3.6.1.4 of the Partly Operative District Plan.

(14) That the consent holder shall locate all underground services prior to excavation and undertake measures to relocate and/or protect existing services. No work is to be undertaken on council provided services or in the vicinity of these services without the prior approval of the Council's Utilities Manager.

(15) At the time of submitting an application for building consent a Registered Surveyor shall certify to Council in writing that the building will comply with the maximum height rules as specified in the District Plan, being a maximum height of 10 metres above average ground level. The surveyor is also to establish a datum on-site or adjacent to the site to provide a reference level against which the building height or ground settlement can be measured.

(16) Prior to the roof of the sixth level being installed on the building a Registered Surveyor shall certify to Council in writing that the building complies with the maximum height rules specified in the District plan being a maximum height of 10 metres above average ground level.

(17) That plans, including cross-sections, of the proposed vehicle entrance/exit shall be prepared by a Certified Professional Engineer and submitted to the council for approval prior to construction. The plans shall detail appropriate measures to provide maximum visibility for vehicle drivers and pedestrians using Wallace Lane.

(18) That a maximum height bar/warning system be installed at the entrance of the property to prevent over height vehicles (e.g. boats on trailers and trucks) from entering the carpark entrance.

(19) That 11 carparks be provided on site in accordance with the Ground Level Basement Plans prepared by, Ormiston Project Management Limited, referenced "Paihia Projects Ltd, Wallace Lane, Paihia, Proposed Development" dated 26 March 2007 and attached to this consent. Each apartment is to have two parking spaces identified and allocated for their specific use.

(20) That all carparks are to be marked in accordance with the requirements of the District Plan. The markings shall be completed prior to the apartments being occupied.

(21) That any stormwater discharged into the Council's stormwater system is to comply with the requirements and conditions of the Far North District Council's stormwater discharge consent. That a producer statement be submitted to the satisfaction of the Council's Resource Consents Manager specifying that the plans and specifications satisfy the building code requirement that surface water be disposed of in a way that avoids the likelihood of damage or nuisance to other property.

(22) That all security lighting required for the apartments is to be directed away from buildings on the adjoining sites. The locations and height of lighting is to be subject to the approval of the Council.

(23) That temporary advertising signage shall be limited to a maximum area of 12.0 m^2 and subject to Council approval prior to installation.

(24) That no building, or part thereof, excavation or other work shall be left unfinished, or shall be allowed to fall into such a condition; and no land shall be allowed to deteriorate or to remain in such a condition that it would, in the opinion

of the Council, become a hazard or visually detract from the amenities of the property, or adjoining properties, or the neighbourhood.

(25) Provide evidence to the Council that each unit has a separate metered water connection complying with Council requirements to the satisfaction of the Council's Utilities Manager.

(26) Pay, as may be required, the Council's actual and reasonable monitoring and administration fees for assessing compliance with these conditions, and for any additional site visits that may be necessary.

ADVICE NOTES:

1. If any subsurface archaeological sites or remains are uncovered during the development of the site, all earthworks in the vicinity shall cease and local iwi and the New Zealand Historic Places Trust shall be contacted immediately so that appropriate action can be taken.
2. Please note a single connection to Council's reticulated Sanitary Sewer or Water may compromise the ability to subdivide by way of unit title in the future.
3. Any further intensification of the site including changing the use from residential to commercial activity will require a resource consent. The applicant's Assessment of Environmental Effects describes the proposal as a 'residential apartment building', with a combined traffic intensity factor (TIF) of 50 movements per day. Because of this relatively low TIF and residential use, both the carriageway width of 5.0 metres and the non-complying sight distances available from and of vehicles accessing Wallace Lane are considered acceptable for a low volume driveway on a collector road.

STATUTORY INFORMATION

(1) Pursuant to section 102 of the Local Government Act 2002, the Far North District Council has prepared and adopted a development contributions policy. Under this policy, the activity to which this consent relates may be subject to development contributions.

You will be advised of the assessment of the development contributions payable under separate cover in the near future.

It is important to note that the development contributions must be paid prior to commencement of the work or activity to which this consent relates.

Further information regarding Council's development contributions policy may be obtained from the long term council community plan (LTCCP) or Councils web page at www.fndc.govt.nz

(2) The registered proprietor of the land is advised that any earthworks (excavation or filling) which alters existing land contours and is undertaken within 3 metres of any road or other property boundary requires permission for the control of earthworks, pursuant to Chapter 22 of the Far North District Council General Bylaws, March 2008.

(3) Prior to undertaking any significant earthworks or clearance of vegetation on the land, the owner should assess the need for a land use consent from the Northland Regional Council and/or an earthworks permit under the *FNDC General Bylaws.*

(4) Prior to constructing a new or an additional vehicle access point to any site, the owner is to obtain a permit from the Council as to the siting (from a traffic safety point-of-view), earthworks, formation and drainage of such access in terms of the Council's Control of Vehicle Crossings Bylaw 2004.

(5) All building work must be carried out in accordance with the Building Act 2004.

(6) It is the responsibility of the consent holder to ensure all necessary building consents have been obtained and any geotechnical issues have been addressed to the Council's satisfaction prior to the commencement of earthworks. This planning consent is not an authority to commence work. To proceed further the consent holder will be required to lodge a further building consent application which can only be granted providing that the engineering, building and bylaw requirements are met.

(7) If any activity associated with this proposal, such as earthworks, fencing or landscaping, may modify, damage or destroy any archaeological site(s), an authority for the New Zealand Historic Places Trust must be obtained for the work to proceed lawfully. An Authority is required whether or not the land on which an archaeological site may be present is designated, resource consent or building consent has been granted, or the activity is permitted under the District or Regional Plan.

(8) If the Northland Regional Council's volume thresholds for earthworks are breached consent will be required from the Regional Council.

LAPSING OF CONSENT

Pursuant to section 125 of the resource management act 1991, this resource consent will lapse 5 years after the date of commencement of consent unless, before the consent lapses;

1 The consent is given effect to; or

2 An application is made to the council to extend the period of consent, and the Council decides to grant an extension after taking into account the statutory considerations, set out in section 125(1)(b) of the Resource Management Act 1991.

In consideration of the application under Section 104 of the Act, the following reasons are given for this decision in accordance with the requirements of Section 113 of the Act:

1. The environmental effects associated with the proposal are considered either to be minor and/or in accordance with the permitted activity standards of the partly operative district plan. In particular the proposed activity meets all bulk and location requirements for permitted activities in the Commercial zone. Infringements of permitted activity standards relate to parking and access in the Commercial zone only. Effects associated with these matters are considered to be minor.

2. The imposed conditions will ensure that the effect of the consent will be in compliance with the relevant provisions of the applicable district plan; and that such conditions will adequately avoid, or mitigate to a minor impact level, the expected adverse effects on the environment.

3. The proposal is considered to be consistent with the assessment criteria as outlined in the Partly Operative District Plan.

4. In making this decision the statutory provisions of Section 104 & 104C and Part 2 of the Act were considered. Also considered were, chapters 7 (Urban environment), 11 (natural and physical resources), 14 (transportation), and the associated appendices of the Partly Operative District Plan. The proposal was also assessed against the relevant district wide provisions outlined part III of the plan.

5. The applicant agreed, as an indication of goodwill to neighbours to include conditions that will also be replicated in the building consent.

   The principle issues of the proposal were considered to be adequacy of access, site stability, stormwater runoff, traffic movements, and safety to the roading

network. It was found that subject to compliance with conditions of consent the proposal will not result in adverse effects and will provide for the sustainable management of natural and physical resources.

THE RELEVANT STATUTORY PROVISIONS THAT WERE CONSIDERED (section 113(1) (aa))

This application was considered as a restricted discretionary activity in the terms of the operative provisions of the District Plan and Section 104C of the Resource Management Act 1991 and Part 2 of the Resource Management act 1991.

OTHER RELEVANT PROVISIONS THAT WERE CONSIDERED (section113(1) (ab)

Partly Operative District Plan:

The Partly Operative Plan is operative in terms of the relevant provisions applying to this proposal.

Written Approvals:

Written approvals were not obtained from all affected parties. Consequently the application was required to be notified.

Other Resource Consents:

No other resource consents are required.

PREAMBLE

The Proposal

Paihia Limited has made resource consent application to construct and occupy a new residential apartment building, comprising of five residential units with on- site car parking, at Wallace Lane, 8 School Road, Paihia.

The applicant proposes to construct a 10m high apartment building, comprised of car parking level at ground level, and six residential levels, containing five residential apartments.

Four of the five apartments proposed consist of a large master suite and two smaller guest suites (each with ensuite bathrooms), a large kitchen and living area separating the master suite form the guest suites and a study. One apartment is larger and split over levels five and six, containing three guest suites, one master bedroom, living space, games room and study.

Vehicle access to the building and ground level parking will be achieved from Wallace Lane.

The Site

The site is legally described as Lot 3 DP 44530, contained in certificate of title referenced NA1544/80. The site is 1189m2 area; access to the site is located off Wallace Lane, 8 School Road Paihia.

The site has a relatively steep contour with an easterly aspect. The site has been subject to slips in the past; the site is currently vacant, overgrown with grass and does not contain any native vegetation.

The site is located approximately 150m along Wallace Lane, from the intersection of School Road and State Highway 11 on the eastern side of Marsden Road/State Highway 11. The site is visible from the coast.

The nature and character of the surrounding properties is predominantly residential single unit development; however Marsden Close Apartments are located at 54 – 56 Marsden Road, adjacent to Wallace Lane. The site is in close proximity to amenities,

with the entrance to the main public car park for Paihia being located some 50 metres along School Road.

Wallace Lane is a private way comprised of three consecutive access legs, with overlying reciprocal right of ways, the legal width of Wallace Lane is 6m. The following properties have right of way access over Wallace Lane:

Lot 3 DP 44530	Will contain the five residential units proposed.
Lot 1 DP 140756	Contain one residential unit with physical access from School Road
Lot 1 DP 73026	
Pt Lot 5 DP 44530	

Therefore three residential units currently utilise Wallace Lane for access, the proposal will result in a total of eight residential units gaining access over Wallace Lane.

Lots 1 and 2 DP 44530 (10 and 12 School Road) currently have physical access located on the School Road, road reserve. Both driveways link into the same vehicle crossing on School Road that serves Wallace Lane.

Application Description

Activity Classification

Under the Partly Operative District Plan the site is zoned Commercial. The proposal complies with all the permitted activity bulk and location rules for the Commercial zone apart from the parking and access provisions under rules 15.1.6.1.1 and 15.1.6.1.2.

The application therefore required assessment as a restricted discretionary activity under the Partly Operative District Plan.

Sections 93 & 94, Resource Management Act 1991

A separate determination was made relating to the processing of the proposal. A determination was made that the application would require limited notification as the proposal complied with the bulk and location rules for the Commercial zone under the District Plan and the traffic report submitted with the application concluded that, due to the width and gradient of the proposed access the proposed activity failed to meet the provision of the District Plan.

Summary of Submissions

The matters of concern raised can be generalised into categories, listed below in no particular order:

- Safety of proposed access, particularly gradient of Wallace Lane, cumulative effects
- Site stability of Lot 3 DP 44530, adjoining properties and Wallace Lane
- Visual amenity and size of the proposed building
- Adverse effects from increased traffic use of Wallace Lane
- Parking availability and manoeuvring

THE PRINCIPAL ISSUES THAT WERE IN CONTENTION (Section 113(1)(ac))

The principal issues that were in contention were:

- Land stability of site and Wallace Lane

- Traffic safety of Wallace Lane with a pavement width of 5.0 metres
- Overshadowing of Marsden Close by proposed retaining wall on eastern side of Wallace Lane
- Adverse effects on neighbours if upgrade of Wallace Lane is not completed prior to apartment construction
- Present flooding of Marsden Close units by stormwater and concerns that the proposed development could worsen this
- Adverse effects of increased traffic using Wallace Lane (suggestion of less units)
- Construction of retaining wall on eastern side of Wallace Lane, and lack of detail making it difficult to assess the proposal for adverse effects. Adjournment suggested
- That the drainage system in place behind the Marsden Close retaining wall might be inappropriately located within Wallace Lane, and if so, would be damaged during construction of the proposed piled retaining wall
- Consideration of Part 2 matters in relation to matters that Council has retained discretion over

SUMMARY OF EVIDENCE HEARD
(section 113(1) (ad))

Council's reporting planner, Melissa McGrath in summary stated that the proposed residential activity would be consistent with the zoning. It was her opinion that, subject to compliance with conditions of consent the environmental effects associated with the proposal would be minor in nature and in most instances would satisfy the permitted activity status of the Partly Operative District Plan.

M McGrath explained that the extent of Council's discretion was restricted to matters relating to parking and access under rules 15.1.6.1.1 and 15.1.6.1.2. M McGrath considered the proposal to be generally consistent with the objectives and policies of the Partly Operative District Plan and with the provisions of the Regional Policy Statement. In relation to Part 2 of the Act, M McGrath considered that the activity would, with appropriate conditions; result in sustainable management of natural and physical resources.

Pradeep Kumar said that there are stormwater issues causing instability of the site. Tabled information (appendix C) showed how the issues could be overcome. He said it has been designed to cope with a flood that is bigger than the March 2007 event that flooded Mr Simpson's Marsden Close apartment. Mr Kumar stated that it was intended that services will be put underground.

Mr Kumar said that there is a conflict between the retaining wall that is proposed and the existing retaining wall; when the engineers drill the holes for retaining wall poles it is possible that they will find scoria and other fill. If they are able to tie the new wall to the existing retaining wall owned by Marsden Close it would strengthen the entire length and avoid risking damage to the existing (effective) drainage system.

Mr Phillip said that an earlier draft report was prepared and at that time they were considering a passing bay, to permit sufficient sight distance, they have now revised the plan to develop a 5 metre width along the entire length of Wallace Lane. The crest curve will remain, but he said that in his professional opinion there will be sufficient sight distance on Wallace Lane.

Mr Kemp said that the applicants' engineers have been able to establish a gradient between the end of the carriageway and seal of between 1 in 44 and 1 in 7.2 with 1 in 5 being the maximum gradient (Standards for Private Access).

Submissions

Mr Dawson represented Violet Johnson, a resident of Marsden Close. Mr Dawson said that no mention has been made of visitor parking. The retaining structure could be 4 metres in height; it will, in part, be directly outside Mrs Johnsons' kitchen and lounge windows, directly affecting her amenity. He said that he was concerned that the final plans have not been presented and that the commissioners have no way of assessing the impact of the development without final designs. Mr Dawson noted that Mr Kumar has said the site is precarious and has slipped before and it is likely that it might slip again. Mr Dawson suggested that the commissioners adjourn the hearing and request the applicant to provide detailed engineering designs. In reference to Jeff Kemps suggestion that some of the conditions are outside of the commissioners' scope, Mr Dawson said that the effects during construction are unavoidable and Council should be able to control the effects (construction hours and noise), Part 2 of the Act must be considered.

Mr Wallace said, as a principal shareholder of Wallace Lane he is entitled to a 6 metre wide accessway Mr Wallace said that future development planned for Paihia will cause traffic congestion at the end of Wallace Lane and School Road and the issues needed to be addressed.

Mr McDonald said that the incomplete engineering plans presented are a concern and there did not appear to be any provision for stormwater runoff. He said there is already a parking problem in Paihia particularly at peak times, during construction there will be a problem with construction vehicles parking.

Mr Simpson said he wanted assurance that stormwater will be controlled.

Mr Morley said his concern was that the standard of Wallace Lane would be at least as good as it is now and that Wallace Lane should be fully developed before construction began as he did not believe that the lane is presently constructed sufficiently to take construction vehicles.

ADJOURNMENT

The hearing was adjourned by mutual agreement until 21st April, to allow the Marsden Close Body Corporate and the developer to communicate and try to solve issues regarding the access way. It became apparent during the hearing that various synergies could be developed in this manner. The parties were advised that the hearing may be reconvened if further information, including detailed options for Wallace Lane by Mr Kumar, was presented to all parties and Council, otherwise the commissioners would make their decision based on the information already to hand.

All parties would be advised if the hearing is reconvened.

POST ADJOURNMENT

On the 30th April, Jeff Kemp, Bay of Islands Planning Ltd forwarded new site survey plans offering options A & B. The information was sent to Submitters and the Commissioners. Mr Kemp requested that the submitters respond by 9th May 2008.

On the 12th May the applicants' Counsel, George Bogiatto, with a view to achieving a negotiated outcome, requested that the Commissioners delay their deliberations for at least two weeks to allow them time to liaise with representatives of the Body Corporate, Paihia Ltd's solicitor and Jeff Kemp, Bay of Islands Planning, to discuss information forwarded to the Body Corporate.

Jeff Kemp, Bay of Islands Planning, advised that a site visit with representatives of the Marsden Close Body Corp and Stan Morley has been held, and following that meeting the applicant provided the Marsden Close Body Corp with an electronic copy of the surveyors' survey data. The engineer is also providing some information on the

preferred option for integrating the access and some clarification of matters for Mr Morley.

The Hearing for RC 2080121 – Paihia Ltd was reconvened at the Council Chambers. Memorial Avenue, Kaikohe on 20th June at 10.30am.

Procedural Matter Raised

Mr Taylor advised that he did not receive formal notification of the hearing and therefore, had not received any information and sought an adjournment of the hearing.

Mr Kemp said that the applicant had met with the Body Corp and Mr Morley and that engineering plans for two options had been circulated to all submitters and discussed. Apparently Mr Taylor had recently changed his address. Negotiations have taken place; Stan Morley has given his written support to the proposal, which was tabled. Mr Taylor accepted the explanation and the hearing proceeded.

Mr Kumar referred to tabled option A sheet 1 –page C 3 and said that the drawing reflected that the boundary is still a substantial distance from the edge of the designed pavement.

The commissioners noted that some of the Marsden Close apartments are reputed to be 3.0 m closer to the boundary than they should be and that the Marsden Close stormwater drains behind the existing retaining wall could quite likely be on Wallace Lane in the proximity of proposed retaining piles.

Mr McDonald said that a requirement of the Building Consent should be that the lane was concreted before construction of the units.

Mr Kumar considered that the engineering plans to tie into existing retaining wall were adequate; however, when the proper analysis is done the engineering design will be changed to ensure that the wall is secure. With regard to structural issues pertaining to Mr Morley's carport, Mr Kumar stated they can build a retaining wall along Mr Morley's boundary to the support his carport. The in ground services will be towards the centre of Wallace Lane, and will include ducts to provide for service access.

Mr Kumar stated as an expert, with regards to concerns raised about stormwater, seepage on Marsden Close and overall stability; the net result will be that there will be far less seepage and far less stormwater flowing onto Marsden Close. All stormwater will be intercepted and field drains installed with the water discharged to the creek on the other side of School Road. After the completion of the development there will be overall a better effect and Marsden Close will be drier, and the area more stable than it is presently

Amenity Issues Mr Kemp commented that the existing vegetation on the boundary of Wallace Lane and Marsden Close is higher than what the retaining wall at approx 2m high will be. He said that a safety rail was discussed during the discussion with Thomson Wilson Lawyers.

Mr McDonald said that the main concern of the Body Corp is to ensure that they are not affected by stormwater or the retaining wall.

Mr Taylor said his submitters would prefer that the building be limited to 4 residential units and the two top floors be removed on the basis of the traffic flow on the right of way, if this can't be achieved the RoW must be 6 metres wide.

Mr Kemp said that the developer will consider either option A or B, and noted that if they were building a single residential unit they would still require a resource consent as the right of way is only 5m wide and the underlying zone is commercial. The site zoning allows 200 traffic movements, reducing the height and number of units by one is not directly linked, as the only difference is 10 daily traffic movements.

Councils summary

Council's Resource Consent Engineer said that with the mitigation measures offered there would be no adverse impact of stormwater on the receiving system. Mr Shand considered that both of the applicant's tabled options A and B for the Wallace Lane improvements were viable and that it would be advantageous to have a curb constructed on the eastern edge of the carriageway to stop stormwater overflow onto Marsden Close. A 1:50 pavement slope from this kerb to the dish water table on the western side of Wallace Lane would assist with ensuring that surface water does not overflow on Marsden Close.

Applicants summary

Mr Kemp said both options are viable but considered that option B is the better option, however, the developer does not want to hold things up with other processes.

THE MAIN FINDINGS OF FACT
(section 113(1) (ae))

The site is underlain by a stable intact rock mass that provides a suitable anchor for building foundations for a multi-storey type structure providing the recommendations in the evidence of chartered professional engineers PK Engineering report Job No: 07-56 are met.

Safe and adequate access from School Road for the proposed residential development and other users can be achieved by improving Wallace Lane as provided for by consent conditions. A pavement width of 5.0 m for Wallace Lane is adequate for the 2-way traffic for both the proposal consented and the existing residential developments. It is necessary to complete Wallace Lane improvements prior to commencement of works on the site to minimise adverse effects to adjacent residents. Present flooding of Marsden Close from surface water from Lot 3 DP 44530 will be prevented by interception measures provided in consent conditions. The provision of two loading spaces as required by District Plan rule 15.1.6.1.1(b) are not necessary because the proposal consented is for residential activities only and will not require the regular deliveries that a commercial activity would.

Part 2 matters are required to be considered when determining conditions for restricted discretionary matters (refer ACC/The John Woolley Trust and SJ Christmas CIV 2004-404-3787).

The main findings of fact determined by the hearings commissioners that have led to the above decision. The decision has been reached after considering the application, the evidence heard at the hearing, the report prepared by the reporting planner, all the relevant statutory and planning provisions, including submissions (section 104), as well as the principal issues that were in contention:

Drawing Title:
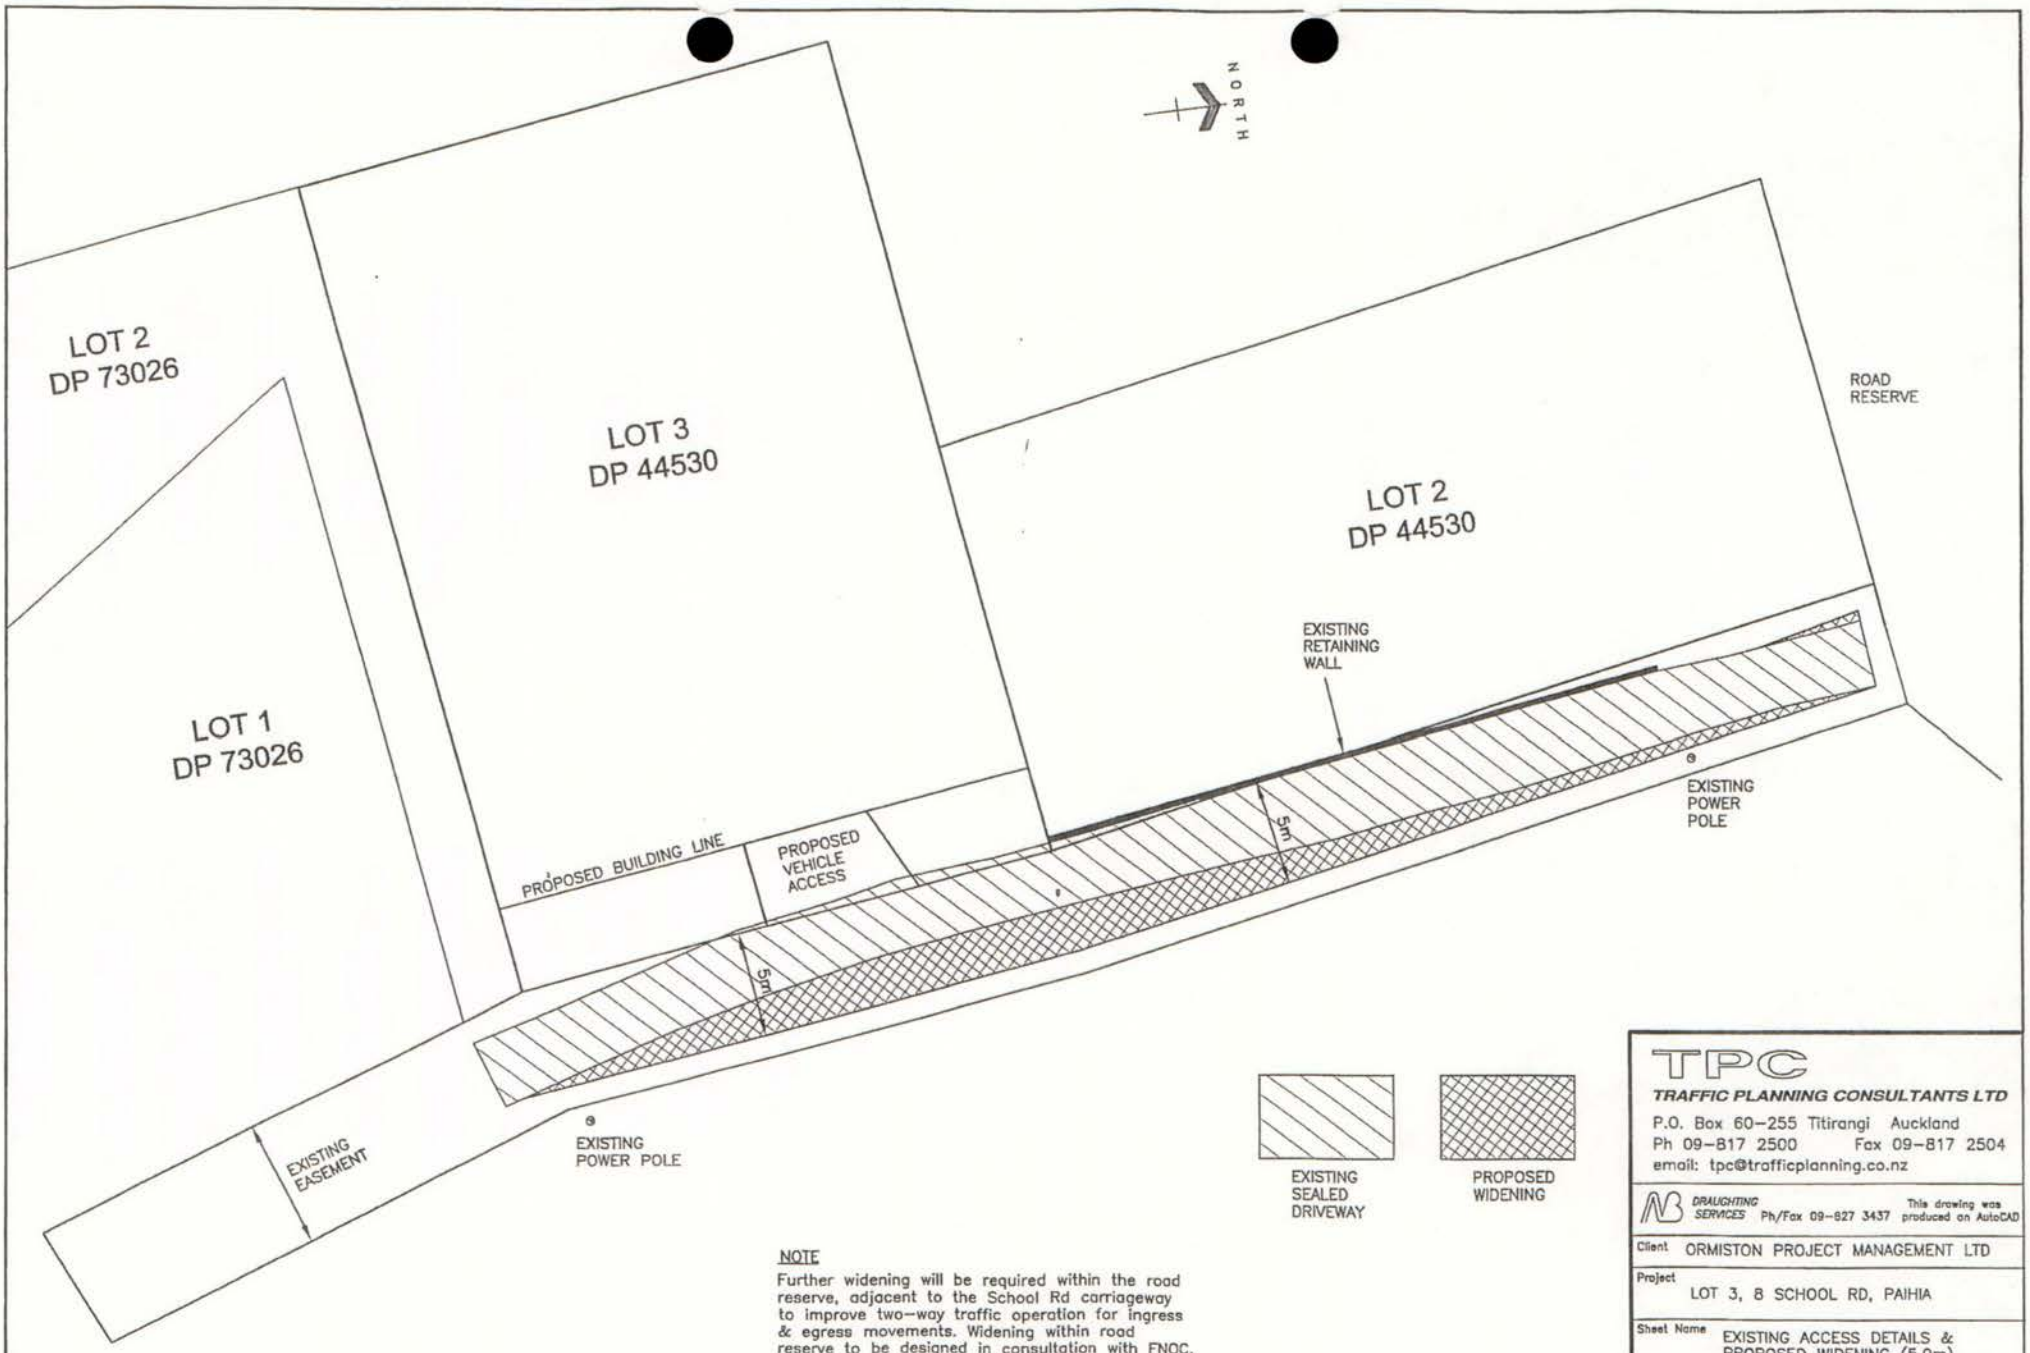
TOPOGRAPHICAL PLAN

File No. 7742 | Rev. 1 | Dwg No.



NOTE

Further widening will be required within the road reserve, adjacent to the School Rd carriageway to improve two-way traffic operation for ingress & egress movements. Widening within road reserve to be designed in consultation with FNOC.
